
HALDIMAND COUNTY

Report CMS-ES-02-2018 2019 Ambulance Response Time Performance Plan For Consideration by Council in Committee on August 28, 2018

OBJECTIVE:

To set the 2019 Haldimand County Paramedic Services Ambulance Response Time Performance Plan.

RECOMMENDATIONS:

1. THAT Report CMS-ES-02-2018 2019 Ambulance Response Time Performance Plan be received;
2. AND THAT Haldimand County adopt the Ambulance Response Time Performance Plan targets for the calendar year 2019 in accordance with the Ambulance Act, Ontario regulation 267/08, amending O. Reg. 257/00 as identified in Attachment 1 of report CMS-ES-02-2018;
3. AND THAT the 2019 Ambulance Response Time Performance Plan, Attachment 1 of Report CMS-ES-02-2018, be submitted to the Ministry of Health and Long-Term Care, Emergency Health Services Director.

Prepared by: Jason Gallagher

Respectfully submitted: B. Hugh Hanly, General Manager of Community Services

Approved: Donald G. Boyle, Chief Administrative Officer

EXECUTIVE SUMMARY:

The provincial ambulance response time reporting standard uses evidence based medicine to establish the target ambulance response times for critically ill, or injured patients. Ambulance response times are affected by several factors including overall call volume, long geographical distances, utilization outside of the municipality, an increase in the number of patient transfers to out-of-county hospitals and off-load delays while transferring care at hospitals.

Haldimand County Paramedic Services has noticed a continual increase in emergency calls over the last ten years and, with the increasing age of the population and the prevalence of health care being provided in the home, this increase is expected to continue. An additional system pressure is the more frequent occurrence of patients requiring ambulance transportation to larger hospitals outside of Haldimand County. The current design of the hospital integration system requires most high acuity patients to be transferred from Haldimand County hospitals, to hospitals outside of the County. Compounding this issue, is the high prevalence of Haldimand County ambulances then being placed on "off-load delay" at these hospitals.

The current ambulance response structure has many challenges that are anticipated to result in increasing ambulance response times. Along with the submission of this Ambulance Response Time Performance Plan, there will be continual monitoring of Paramedic Services ambulance response times and future recommendations to Council, aimed at maintaining appropriate ambulance response times within Haldimand County.

BACKGROUND:

In 2006 the provincial government, in conjunction with the Association of Municipalities of Ontario (AMO) established a Land Ambulance Committee (LAC) to review various subjects including the Ambulance Response Time Standard. On July 31, 2008 the provincial government made changes to the *Ambulance Act*, Ontario Regulation 267/08, amending O. Reg. 257/00 with the heading Section 22: Part VIII, Response Time Performance Plans, and Sections 22 and 23 (Attachment 3). These changes were fully implemented in 2013 with reporting requirements starting October 1, 2012.

These changes were intended to modernize the ambulance response time performance targets; establish equity in the measurements for municipalities; and provide municipalities with some new flexibility in determining resource allocations. In addition, municipalities are able to use response times from the Fire Department and Public Access Defibrillation (PAD) programs for some of the reporting purposes.

Each municipality is required to send its Ambulance Response Time Performance Plan (RTPP) to the Ministry of Health and Long-Term Care (MOHLTC), Emergency Health Services Branch Director no later than October 1st each year. The RTPP will publically set each municipality's ambulance response time performance expectations, by March 31st every year. Each municipality must report to the MOHLTC the actual ambulance response times achieved in the previous year. The ambulance response time reporting standard measures ambulance response time based on the severity of the call as found by the paramedic (versus how it was dispatched). Measuring the response time based on the assessment by the paramedic (versus how the call was dispatched) is consistent with the medical evaluation model.

The ambulance response time reporting standard divides ambulance calls into the below six categories:

1. **Sudden Cardiac Arrest (SCA):** person has no pulse and is not breathing;
2. ***CTAS I:** severely ill, requires resuscitation (i.e. major trauma, choking etc.);
3. ***CTAS II:** requires emergent care and rapid medical intervention (i.e. head injury, heart attack);
4. ***CTAS III:** requires urgent care (i.e. mild asthma);
5. ***CTAS IV:** requires less-urgent care (i.e. earache);
6. ***CTAS V:** requires non-urgent care (i.e. sore throat).

*See attachment 4 for more information on the Canadian Triage and Acuity Scales (CTAS)

The first two categories in the response time performance plan are SCA patients and CTAS level I patients. For each of these two categories the MOHLTC has set the response time target and it is up to the municipality to target and then report, the percentage of the time that they will meet the response time target. For SCA patients the provincial response time standard for getting a defibrillator to the call is six (6) minutes from the time the ambulance crew is notified. The municipality is permitted to count the time that any defibrillator (including Fire Department and Public Access Defibrillators) was used to assist a victim of SCA.

For CTAS Level I patients the provincial response time standard (from the time the paramedic crew is notified of the call until the time they arrive at the scene) is eight (8) minutes.

In each of these two cases it is up to Haldimand County to establish its own target for how often they can meet the established response time standard.

For the four less acute categories (CTAS Level II through CTAS Level V), the municipality will establish their own target ambulance response times and their own percentage targets.

ANALYSIS:

Haldimand County Paramedic Services submitted a 2018 Ambulance Response Time Performance Plan in report CMS-ES-02-2017 which was received by Council on August 22, 2017. In that report the following 2018 performance targets were established:

- Respond to cardiac arrest patient in six (6) minutes or under 40% of the time;
- Respond to CTAS level I patients in eight (8) minutes or less 50% of the time;
- Respond to CTAS level II patients in seventeen (17) minutes 90% of the time;
- Respond to CTAS level III patients in seventeen (17) minutes 90% of the time;
- Respond to CTAS level IV patients in twenty (20) minutes 90% of the time;
- Respond to CTAS level V patients in twenty (20) minutes 90% of the time.

Thus far, the 2018 data reveals that the established performance targets are being met. As the 2018 data is only for a partial year, the 2017 response time data is primarily being relied upon to establish the 2019 targets. The 2017 response time performance (complete year) is shown as Attachment 2.

The ambulance RTPPs that are submitted by each municipality are made publically available. The availability of these plans and the subsequent actual performance (measured by March 31st of the following year) are intended to ensure transparency and accountability on the part of the municipality. To develop the ambulance RTPP submission to the MOHLTC regarding the 2019 performance, staff considered past practise to establish future targets. Ambulance call volume and response time data from 2017 and the first half of 2018 was utilized to project what Haldimand County's 2019 response times would be, assuming the demand for paramedic services is similar to the same period. The recommended ambulance RTPP targets that are submitted with this report, represent a conservative and achievable approach.

2019 Ambulance Response Time Performance Plan Targets

In order to comply with this standard, Haldimand County Paramedic Services has developed a proposed ambulance RTPP for 2019. This plan considers the previous year's performance in setting the 2019 targets. The 2019 compliance target for meeting the MOHLTC response time standard of six (6) minutes for Cardiac Arrest patients is 40 percent. This means that Paramedic Services targets a defibrillator arriving at the scene of a cardiac arrest within the six (6) minute response time 40 percent of the time. While this target may not seem robust, it is reflective of the actual performance achieved within the past eighteen (18) months.

The 2019 compliance target for meeting the MOHLTC response time standard of eight (8) minutes for CTAS Level I patients is 50 percent. This means that Paramedic Services targets arriving at the scene of critically ill, or injured patients, within the eight (8) minute response time 50 percent of the time. Similar to the cardiac arrest response time, this target is reflective of the actual performance achieved within the past eighteen (18) months.

The response time targets and compliance targets for the CTAS II through CTAS V patients has been established using recent actual performance. This sets a 90th percentile response time of seventeen (17) minutes for CTAS II and CTAS III patients and a 90th percentile response time of twenty (20) minutes for CTAS IV and CTAS V patients.

FINANCIAL/LEGAL IMPLICATIONS:

The submission of Haldimand County's Ambulance Response Time Performance Plan to the Director of the Emergency Health Services Branch, Ministry of Health and Long-Term Care is a legislative requirement. The actual performance of Haldimand County Paramedic Services as it relates to the submitted 2019 performance plan targets will be compiled no later than March 31, 2020 and will be made available publically. There are no budget implications associated with this report given that the recommended targets have been established taking into consideration the existing resources.
