

# Haldimand County

## Comprehensive Signage Strategy

DRAFT FINAL

July 2022

Stempski Kelly Associates Inc.

## Haldimand County Comprehensive Signage Strategy

Prepared for:

### The Corporation of Haldimand County

Project Management:

Lidy Romanuk	Manager of Economic Development & Tourism
Alison Earls	Senior Economic Development Officer, Economic Development & Tourism
Katrina Schmitz	Manager, Community Development & Partnerships
Jeremy Misner	Manager, Facilities, Parks, Cemeteries and Forestry Operations
David Pressey	Director, Roads Operations
Kyra Hayes	Supervisor, Customer Experience & Communications

Further review of this document was conducted by the Comprehensive Signage Strategy Committee:

Kim Drew	Tourism Network
Ann Baldwin	Heritage Haldimand
Caitlyn Hoffman	Haldimand Business Network
Mike Lessard	Business Development and Planning Advisory Committee
Janet deVos	Trails Committee

## Introduction

The Haldimand County Comprehensive Signage Strategy (HCCSS) is a forward-facing document capturing foundational work, rationale, pertinent information, and a How-To Guide providing insight on the implementation of a successful county-wide signage system. Those with queries related to county signage (e.g., rationale for sign placement and messaging, who is responsible, how to implement and assess signage, etc.) should be directed to this document.

## Goals of the Strategy

- Increase economic impact within Haldimand County by utilizing clear directional signage to promote awareness and visits to our attractions and assets.
- Equip users with easy-to-read information allowing a logical and intuitive experience when exploring Haldimand County's services and attractions.
- Ensure consistency and will reduce the variety of signage that is currently in place.
- Help to implement a recognizable, cohesive identity that communicates a welcoming, innovative and authentic experience.
- Once the signage strategy (and associated design concept) is developed it will be used as the corporate standard for scheduled replacements and new proposed signage.

## Getting Here

Prior to the adoption of the HCCSS, Haldimand County lacked an overarching signage strategy. Haldimand County sought the services of Stempski Kelly Associates Inc. to develop a comprehensive signage strategy, that would primarily include wayfinding and identification signage to direct residents and tourists to key tourism and travel destination points within the municipality. Additionally, existing supporting signage programs have also been addressed within the strategy in efforts to streamline and consolidate the look of all signage throughout the Haldimand County Signage System (HSS).

In 2017 Haldimand County Council approved an Economic Development Strategy and Tourism Strategic Action Plan, which highlighted that stakeholders cannot easily identify or describe Haldimand's unique identity, brand, strengths, location or the economic development opportunities that exist. This resulted in Haldimand County implementing new brand guidelines in 2019, to create a competitive identity to inform both economic investment attraction efforts and destination development/promotion efforts. This strategy identified that, in order to stand out in a crowded marketplace, clear signage directing and welcoming visitors to the region and its destinations as well as a strong, visible brand is required. With the approval of the 2017 Tourism Strategic Action Plan, and the implementation of the new brand guidelines, Haldimand County is now well positioned to implement a comprehensive signage system.

## The Wayfinding Development Process

A wayfinding system consists of many integrated parts as described throughout the following Information Section. This Information Section is less of a 'how-to' but rather a description of the tools and methods used to create the resulting signage system. This process results in a final system that becomes the starting point from which the HCCSS Implementation Team can move forward with as described in the 'How-To' Guide.

The following parts are the key development components of the integrated system. Collectively, it is the process followed to develop a signage system.

### 1. A Wish List of Destinations

As a starting point, a wish list of destinations is one that includes all requested destinations for consideration. These destinations are organized into categories for a greater understanding of the places to be included. Specific considerations are followed to ensure that individual destinations have the appropriate attributes for inclusion.

### 2. Criteria Development

Specific criteria are developed to help rank and prioritize the destination list. The resulting hierarchy will determine where along a wayfinding route a destination message will be included on a sign. More prominent destinations appealing to a wider audience will be included at the beginning of the system (as one enters a community) and will have a higher-ranking level. Destinations with less importance will be included at a later stage in the system and will have a lower-ranking level. This is not to be confused with placement and order on a sign, but that it is included on the sign in the first place.

### 3. Destination and Route Mapping

Highlighting destinations, possible routes and decision nodes assist with navigational needs and sign placement.

### 4. Sign Type Development

The messaging requirements associated with both destinations and a Family of Signs will further assist in organizing the system into appropriate sign features.

### 5. Sign Messaging and Location Charts

The final ranked destination list is then integrated with the routes, decision nodes, and designated sign types to create the resulting signage system (refer to HCCSS Destination List on page 12 for more information). The placement and order of destinations on a sign is dependant on the maneuver required at the given decision node and the distance to the destination. Each sign type with its specific messaging is then recorded on a messaging chart. The system is presented as a series of messaging charts and associated sign location maps on the Haldimand County GIS Database.

At this point, the development process has been completed and the implementation of the system can begin. The 'How-To' Guide is a road map on how to get the HCCSS off the table and

into the ground. It includes information on how to manage the system, considerations for phasing and setting priorities for implementation, what to include for the tendering process and how to maintain the system and the signs within it.

## Defined Terms

The following definitions are provided for clarification.

**Attribute Table:** a database or tabular file containing information about a set of geographic features, usually arranged so that each row represents a feature, and each column represents one feature attribute. In a GIS, attribute tables are often joined or related to spatial data layers, and the attribute values they contain can be used to find, query, and symbolize features or raster cells.<sup>1</sup>

**Comprehensive Signage Strategy (CSS) Committee:** the committee responsible for reviewing and providing comment on the development of the HCCSS. For a listing of members refer to Opening Remarks.

**Geographic Information System (GIS):** a system that creates, manages, analyzes, and maps all types of data. GIS connects data to a map, integration location data (where things are) with all types of descriptive information (what things are like there). This provides a foundation for mapping and analysis that is used in science and almost every industry. GIS helps users understand patterns, relationships, and geographic context. The benefits include improved communication and efficiency as well as better management and decision making.<sup>2</sup>

**Haldimand Signage System (HSS):** a network comprised of all County-owned and implemented signage, proposed, and existing.

**HCCSS Project Management Team:** the team responsible for engaging with the consulting team (Stempski Kelly Associates Inc.) and overseeing the development of the HCCSS. For a listing of members refer to Opening Remarks.

**HCCSS Implementation Team:** the team responsible for the implementation of the HCCSS. This team is still to be established.

**Multimodal Transportation Facility:** a transportation facility supporting multiple modes of transportation (e.g., trains, buses, automobiles, planes, boats, active transport, etc.).

**Wayfinding Circuit:** a group of signs (often consisting of several sign types) whose success is dependant on the installation of the other signs with corresponding directional messages.

## Chapter One: Information Guide

## Inclusion Criteria

Signage is a powerful tool that can direct users to sought-after destinations or draw users to unfamiliar ones. Haldimand County has an extensive list of destinations ranging in scale, purpose, and on-site amenities. When establishing a signage strategy, it is important to create a refined master list of destinations, rather than including them all. This practice is to ensure:

- Haldimand County showcases its greatest destinations; and
- Users are directed to destinations of a certain quality and amenity; and
- Users are directed to safe and welcoming sites; and
- Limited signage space is used effectively.

To create the HCCSS Destination List, all County destinations were evaluated against inclusion criteria. If a destination did not meet the criteria, it was not selected for inclusion in the HCCSS. This criterion has been developed based on a review of best practices, criteria utilized by counties of a similar size and character, and the unique needs and desires of Haldimand County.

## Distance

- ☐ Destination is within Haldimand County borders.  
\*Destinations located outside of Haldimand County, located along a shared route shall be given special consideration, should it meet the remaining criteria and be of significant mutual benefit to the County and the jurisdiction in which the destination resides.

## Ownership

- ☐ Destination is considered an asset of Haldimand County; and
- ☐ Open to the public.

## Identification

- ☐ Destination features an identification sign to inform users that they have arrived at the destination.
- ☐ Destination is a singular 'place' rather than a series of places, or a generic attraction such as a 'waterfront'.  
\*An access point to a 'motive' or scenic route may be considered a place, should it meet the remaining criteria.

## Maintenance

- ☐ Destination is welcoming in appearance and is kept to an acceptable standard, as defined by Haldimand County.

\*Acceptable standard should consider the safety and overall aesthetic appearance of the destination.

### Access/Parking

- ☐ Destination has a designated parking facility on-site; or  
Destination is within walking distance of a public parking facility (e.g., parking lot, on-street parking, etc.); or  
Destination is within walking distance of a public transit stop.

### Classification

Destination is classified as one of the following:

#### District

- ☐ Officially designated area as per planning or zoning regulations (e.g., Downtowns, designated commercial areas, etc.).

#### Government Building

- ☐ A public building occupied by any level of government; and
- ☐ Tourist-friendly.

#### Cultural or Institutional

##### Secondary School

- ☐ A facility that offers secondary and/or post-secondary education; and
- ☐ Occupies a distinct campus area; and
- ☐ Hosts community events (e.g., tournaments, leagues, workshops, etc.).

##### Institution

- ☐ Operated by any level of government.

##### Heritage Sites

- ☐ Operated and maintained by Haldimand County.

##### Library

- ☐ Operated and maintained by Haldimand County.

##### Theatres, Performing Arts & Concert Halls

- ☐ Operated and maintained by Haldimand County.

##### Transportation Centres

- ☐ Services residents and tourists; and

- ☐ A multi-modal transportation facility.

#### Cemeteries

- ☐ Operated and maintained by Haldimand County; and
- ☐ An active cemetery; or  
An inactive cemetery with historical significance.

#### Recreational

##### Waterfront

- ☐ Presents significant recreational value; and
- ☐ Provides access to water.

##### Hiking & Cycling Access Points

- ☐ Operated and maintained by Haldimand County; or  
Operated and maintained by government agency; and
- ☐ Trail/route is recognized and promoted by Haldimand County; and
- ☐ Trail/route has adequate identification and regulatory signage throughout.

##### Parks

- ☐ Features amenities to serve residents, guests and visiting public.

##### Sports Facilities, Recreation & Community Centres/Halls, Outdoor Cultural Amenities

- ☐ Operated and maintained by Haldimand County; and
- ☐ Considered a stadium, rink, arena, auditorium, convention centre; or  
Considered an outdoor sport field, recreation court, or sporting facility, that services the region; and
- ☐ May include facilities with destination appeal to visitors.

#### Tourism Services

##### Visitor Information Centre

- ☐ A primary support centre catering to visitors; and
- ☐ Operated and maintained by Haldimand County; or  
Operated and maintained by a government agency; or  
Operated and maintained by a non-profit agency.

##### Unique Natural Area

- ☐ An area of special interest with destination appeal to visitors.

## Attractions

- ☐ Identified as a major tourism attraction providing reciprocal interest, by Haldimand County; and
- ☐ Offers recreational, health and wellness, educational, historical, and/or cultural attractions/activities with destination appeal to visitors; and
- ☐ May include seasonal facilities (Farmers Market, Agricultural Fair Grounds) and
- ☐ Operated as a public facility (otherwise should be part of optional 'Pay to Play' program)

## Ranking

Sign space is limited so care must be taken to ensure it is used effectively. Ranking destinations is necessary to determine which destinations will take priority on signage, and which will be deferred until later in the signage system. To determine priority, all destinations on the HCCSS Destination List were ranked by the Project Management Team, using the following four classification levels. The classification levels have been developed based on a review of best practices, classification utilized by counties of a similar size and character, and the unique needs and desires of Haldimand County.

### Level One: Major Destinations

Regional attractions, with information responding to vehicular traffic. Level One destinations include major destinations, or areas and districts that provide primary visitor information. These accessible destinations will have ample parking opportunities. Level One messaging begins at the periphery of the signage system, usually in close proximity to a County Gateway, or primary decision nodes.

Examples may include but are not limited to downtown districts, municipal buildings, and tourist information centres. If established, major sporting or athletic centres, convention centres, and town centres could also be included.

### Level Two: Popular Attractions & Landmarks

Popular civic, cultural, historical, and leisure destination that generate many visitors and tourists. Included are attractions or services catering to residents residing within Haldimand County and surrounding areas. Primarily located on major roads, and well connected to multi-modal routes. Often has its own parking facilities or is in close proximity to public parking. Level Two messaging begins at the nearest primary decision node, along the major road nearest to the destination.

Examples may include, but are not limited to, destination parks with multiple facilities, museums, larger community centres, and trail heads.

### Level Three: Local Destinations

Local destinations, parks and attractions that provide service to specific visitors and residents. Site amenities located within Level One or Level Two destinations, or stand-alone amenities (e.g., a designated boat launch, etc.) may be included at this level. Seasonal attractions that are regionally significant may also be included within this level, so as not to compete with destinations that open all year. Often located on local or collector roads, and/or multi-modal routes. In close proximity to public parking. Level Three messaging begins on the nearest main road intersection.

Examples may include, but are not limited to, libraries, smaller parks, trail connections, designated boat launches, active cemeteries, smaller community centres, and farmer's markets.

#### Level Four: Neighbourhood Destinations & Local Services

Neighbourhood destinations and/or local services. Destinations that cater to either residents, or to visitors with a single intention. Located within comfortable walking distance (i.e., 350 to 450 metres) of Downtown and/or public parking.

Examples may include, but are not limited to, washrooms, electric vehicle charging stations, neighbourhood parks, dog parks, community gardens, historic cemeteries.

## HCCSS Destination List

Using the inclusion criteria and ranking classifications provided earlier in this report, the Project Management Team (refer to Opening Remarks) compiled the HCCSS Destination List. All HCCSS work and planning has been based upon these destinations.

This list outlines all destinations to be included on directional signage. For a full list of destinations requiring identification signage refer to Appendix A: 2022 Haldimand County Destination List on page 78.

Note: The Project Management Team (refer to Opening Remarks) purposefully omitted some Level Three and all Level Four ranked destinations.

### Legend

- ☐ Location to Sign

- ☐ Dunnville Public Library  
[Harvard Memorial]
- ☐ Hagersville Library
- ☐ Jarvis Public Library  
[Jarvis Walpole War Memorial]

\*Please note tourism information centres are located within all Haldimand County libraries.

## Comprehensive Family of Signs

The Comprehensive Family of Signs has been developed to consolidate the many sign programs currently within the existing signage system. For a full listing of the existing sign programs within the preceding signage system, refer to Appendix B: Sign Programs (pre HCCSS) on page 84.

A Family of Signs is a collection of sign types that have a cohesive and unified appearance and support a common brand. A sign type is a singular sign feature that serves a primary messaging function. It may include additional messaging information of lesser importance.

The prescribed 'Family' consists of three categories of sign types: Identification Signs, Directional Signs, and Support Signs. Each category contains many sign types, suited to the abundant circumstances that could benefit from new and/or improved signage, throughout the County. For a listing of the sign types focused upon throughout the remainder of this report, refer to HCCSS Sign Type Focus on page 37.

General explanations for sign function, hierarchy, location, and general design considerations, and applications have been provided for each sign type. Further details regarding sign location and placement, and sign design detailing can be found later in this report.

## 1. Identification Signs

### Gateway Signs

#### Function

- A 'gateway' is a portal through which one travels, from one place to another. The identification of the gateway informs one that they are entering a new place.
- Gateway signs are used for County, Community, Settlement Areas, Towns, and/or specific area districts (e.g., Downtown).
- May include a welcome message, local slogans or awareness message, local service groups, population size, etc.

Figure 1: Gateway Vehicular County (Primary) Signage Illustration

Figure 2: Gateway Vehicular Settlement (Secondary) Signage Illustration

- Optional 'Goodbye' message or other, on the back side.

#### Hierarchy

Sign hierarchy for gateway signs is two-fold and responds to both access route, and settlement area size.

- Gateway County (Primary): These signs will be those that are located on primary travel routes into the County.
- Gateway Settlement (Secondary): These will be located on main access routes into larger settlement areas (e.g., Caledonia, Cayuga and Dunnville)
- Gateway Settlement (Tertiary): These will be located on main access routes into smaller settlement areas and hamlets, and on secondary access routes into larger settlement areas.

Figure 3: Gateway Vehicular Settlement (Tertiary) Signage Illustration

Figure 4: Gateway Watercraft County Signage Illustration

#### Location

- Located on the primary vehicular travel routes leading to a destination or place.
- Specifically, at or near the County boundary as defined by the Official Plan.
- Gateway signs may also be placed at the entrance into the County or a community along alternative travel routes, such as along a hiking or cycling trail or the Grand River. (e.g., as a trail or the Grand River crosses the border into the County, a gateway sign will indicate that the traveller has now entered Haldimand County.)
- Frequency is determined by access portals into the county.

Figure 5: Gateway Active County Signage Illustration

#### Design Considerations

- Gateway signs enhance the sense of arrival and introduce the County's sign aesthetic and establish the intuitive recognition of the wayfinding system.

- Gateways should maintain a friendly character and be specific with their welcoming message.
- Additional messaging, such as regulatory (e.g., Share the Road), specific messaging (e.g., Covid information) or route identification (e.g., Waterfront Trail, the Great Trail) should be placed independently of gateway signs.
- Sign size and specific sign type should be relative to road speeds, modality, and size of community/settlement area.
- As a minimum, Haldimand County should provide a Gateway sign for all recognized communities, settlement areas, hamlets etc. as identified in the Official Plan.
- New gateway signs should be placed on primary and secondary entrance routes and gateway points that do not currently have a gateway sign.
- Current practice shows that many Community Gateway signs (e.g., Caledonia, Cayuga, Dunnville) are designed and paid for in part by local community groups (e.g., BIA's). These should be encouraged and maintained as they celebrate local support, character, and initiatives.
- Include County gateway signs at trail entrances into the County (e.g., The Great Trail, the Waterfront Trail) and along the Grand River to acknowledge entrance portals into the County.
- Haldimand County is greatly supported by its many service groups and volunteer organizations. When new signs are replacing old signs that include recognition of Community Service Groups via a service group sign, the County should consider if the service groups are still relevant and able to provide a sign that will fit in the design template for the particular sign type.

#### Applications

- Haldimand County Gateways on a road or highway
- Haldimand County Gateways on an existing hiking trail or cycling route (e.g., The Grand Trail)
- Haldimand County Gateway on the Grand River
- Settlement Area Gateways (e.g., Caledonia, Selkirk, etc.)

## Destination Identification

Parks, Trailheads, Lake and Grand River Access Points, Community Facilities, Parking Lots etc.

### Function

- Highlights the identification or name of a park, facility, or trailhead.
- Informs the user that they have arrived at their intended destination.
- Integral to the system as the terminal identifier along a wayfinding route.
- May include supplemental information (e.g., community support, stewardship etc.)

### Hierarchy

Sign hierarchy for destination identification signage responds to the scale of the destination, the facilities available, and the intended user groups.

- **Community Park Identification (Primary):** These will be the main identification sign for a Community Park offering many activities and facilities, and appeal to a wide range of visitors and guests (e.g., Kinsmen Park in Caledonia).
- **Neighbourhood Park Identification (Secondary):** These are smaller in scale and will be located in smaller destinations such as Neighbourhood Parks (e.g., Fishersville Lions Park).
- **Amenity & Facility Identification (Tertiary):** These are the smallest and will be used to simply identify the name of the amenity (e.g., trails, cemeteries, playing fields, etc.) or facility (e.g., civic or community centre).

Figure 6: Community Park Identification (Primary) Signage Illustration

Figure 7: Neighbourhood Park Identification (Secondary) Signage Illustration

Figure 9: Amenity Identification (Tertiary) Signage Illustration

Figure 8: Facility Identification (Tertiary) Signage Illustration

### Location

- At or near the primary entrance to the destination with good visibility from the road or travel route.
- Consider multiple access points with regard to travel modes.
- As a place identification sign, there would be one sign per park, per access (i.e., vehicular, water, and/or trail).

### Design Considerations

- Primary messaging to be legible to users in their primary travel mode upon arrival to the destination.
- Parking lot identification signs may include relevant information in regard to regulations and type of parking (i.e., free, metered, permit).
- Identification sign may be combined with information kiosk to limit sign clutter if necessary.
- Existing trailhead signs and information kiosks in good repair could be modified to suit new strategy guidelines in effort to extend the life of current infrastructure.
- May include supplemental symbols to highlight activities within the destination (e.g., swimming pool, tennis, skate park, dog park, washrooms, etc.).
- Incorporate sign guidelines for Grand River Access Points as provided in the Grand River Access Point Standards Manual.
- Many existing identification signs currently have the old Haldimand logo on them. Replacement should be considered in the phasing plan, as budgets allow.
- Specific sign type to be determined based on desired placement, size of destination, destination use, and proximity to the mode of transportation.
- Grand River Access Points (x9 access points in Haldimand County) should integrate guidelines for sign design from the Grand River Style and Signage Guide, and the Grand River Access Point Standards Manual to maintain place identity for both the Grand River and its place within Haldimand County.
- Optional digital messaging boards could be considered for major activity or event spaces as desired.

### Applications

All proposed destinations on the HCCSS Destination List should have an Identification Sign.

Examples include:

- Parks and Trailheads
- Recreational and Civic Facilities
- Grand River Access points (from river access and road access)
- Parking lots

## Trail or Route Marker (Hiking, Cycling, and Scenic Routes)

### Function

- Single identification marker highlighting a designated travel route (e.g., Cycling Trails) or highway designation (e.g., Veterans Memorial Highway)
- Allows user to know that they are on the designated route and are going in the correct direction.

### Location

- At trailheads, the beginning of a scenic route, at decision nodes along the route, and at intermittent points along long stretches to signify one is still on the correct route. Frequency for trail reassurance is approximately every 400 (urban areas) to 1000ms (road or trail) of uninterrupted travel.

### Design Considerations

- Sizing to accommodate specific user group (e.g., driver, cyclist, hiker).
- Use in conjunction with existing regulatory signage to limit confusing messaging and liability for use of route.
- Signs should be single sided to respond to the direction of travel.
- Current use or route recognition should be reviewed prior to embarking on replacement signs.
- Coordinate identification and information about routes with website information and Google Maps.
- Existing designated trails (i.e., the Great Trail and the Waterfront Trail) that pass through Haldimand County have their own trail identification signs. These trail identification signs are not part of this strategy however should be implemented where appropriate.

Figure 10: Trail Marker Identification Signage Illustration

Figure 11: Cycling Route Identification Signage Illustration

Figure 12: Multit-Trail Identification Signage Illustration

## Applications

These will replace existing trail or route reassurance signs located on any existing Haldimand County hiking, cycling trails or routes, and vehicular routes. Routes or trails under the jurisdiction of other agencies (i.e., the Grand River and the Great Trail) are exempt from this strategy. Examples include the Yellow Route (Lowbanks Loop Trail) and the Cayuga Grand Vista Trail.

## 2. Directional Signs

### Directional via Vehicular Rural

#### Function

- To inform drivers along rural routes outside of urban areas, using directional arrows and distance markers, of approaching designated destinations.

#### Location

- On rural highways and roads where speeds are over 80km/hr.
- Often located on the approach to a settlement area, after a gateway sign.
- Placed in advance of decision nodes.

#### Design Considerations

- To accommodate a maximum of 5 destinations for optimal recognition/readability.
- Consider only 3 or 4 destinations to allow room for symbols if needed.
- Highlight destination activities and amenities with use of symbols if space allows.
- Can include destinations outside of County boundary, with coordination and approval of neighbouring County.

Figure 13: Directional via Vehicular Rural Signage Illustration

## Directional via Vehicular Urban

### Function

- To inform drivers along urban roads within an urban boundary, using directional arrows and distance markers, of approaching destinations.
- To include all levels of destinations.

### Location

- On urban roads where speeds are less than 80km/hr.

### Design Considerations

- Sign panel to accommodate a maximum of 5 destinations for optimal recognition/readability.
- Footer banner to accommodate appropriate activity / amenity symbols etc.
- Settlement Area identification may be included as an additional header.
- Include a district identifier for downtown areas.
- Downtown directional signs could be heightened with additional design detailing (i.e., post, armature, hardware).
- Seasonal destinations (e.g., Farmers market) to be separate from the system to accommodate location change and seasonal operation.

Figure 14: Directional via Vehicular Urban Signage Illustration

## Directional via Vehicular Local

### Function

- To inform drivers along urban and/or local roads, using directional arrows and distance markers, of a single approaching destination.
- Useful when a Vehicular Urban Sign is too large, but directional signage is still necessary to complete a circuit.
- To include all levels of destinations.

### Location

- On urban and/or local roads where speeds are less than 80km/hr.

### Design Considerations

- Sign panel to accommodate a maximum of 1 destination for optimal recognition/readability.
- Footer banner to accommodate appropriate activity, amenity symbols, etc.

Figure 15: Directional via Vehicular Local Signage Illustration

- Settlement Area identification may be included as an additional header.
- Include a district identifier for downtown areas.
- Downtown directional signs could be heightened with additional design detailing (e.g., post, armature, hardware).
- Seasonal destinations (e.g., Farmers market) to be separate from the system to accommodate location change and seasonal operation.

## Pay to Play Directional Signs - Optional

### Function

- The Pay to Play program is a wayfinding system that supports private tourism and agriculture generating destinations outside of publicly operated destinations.
- Signs are independently funded by private business that subscribe to the program.

### Location

- The Pay to Play signs will complement the Ontario Pay to Play system that offers sign opportunities on the MTO routes.
- Signs should be considerate of the existing MTO system, and should maintain a fluid, unbroken route to lead the visitor to their destination.
- Pay to play signs will vary in size to accommodate the number of tourism destinations ahead.

### Design Considerations

- The Pay to Play signs will complement the HC signs in appearance.
- Existing signs should be replaced with the proposed sign types at the end of the current 'lease' period of the latest sign vendor.
- Existing vendors could be granted a transition period via complimentary signs etc. to encourage their support of the new sign designs.

### Applications

Haldimand County's 'Pay to Play' program allows tourism operators to promote their tourism-related business via directional signage. The program was established in 2012. It was conceived as a five-year program and included a maintenance fee for the five-year term. The signs were

Figure 16: Pay to Play Directional Signage Illustration

Figure 17: Pay to Play Directional Signage Illustration

produced and installed by a local sign company. Due to capacity County staff did not end up providing maintenance as originally anticipated. The existing signage has therefore remained in place since its installation date.

The program was put on pause in 2019 anticipating an update to the signage strategy which was delayed due to the pandemic.

Many of the challenges related to Haldimand County's signage program are due to the limited resources available to promote and administer the program. Haldimand staff reported that the program suffers from a lack of awareness among operators. There has not been any follow up with participating operators since joining the program. Marketing for the program needs a refresh and relaunch after the hiatus.

Haldimand County could benefit from a more streamlined process that is administered seasonally, like other communities with similarly limited staff. In this scenario the seasonal tourism staff could conduct an inventory of the existing signs to confirm their condition prior to the summer tourism season. The summer staff would be responsible for the promotion and administration of new signs. Signs would be produced and installed by a local sign contractor at the beginning of each season. The sign production schedule would be promoted in the off season with a final promotional push just prior to the annual sign production.

The cost to participate in the program was identified as a barrier for some of the smaller tourism operators. Haldimand County's signage rates are in line with its neighbouring jurisdictions. The County should consider lowering its maintenance fees by moving to a three-year cycle in line with the neighbouring jurisdictions. The maintenance fee would cover a three-year period during which any damaged signs would be replaced at no additional cost to the operator. The County could continue to allow signs that remain in good condition to remain in place, as is the current practice. Beyond the three-year period however, any signs that are damaged or in poor condition would be replaced at the tourism operators' cost.

The County may also want to consider a reduction of signage fees for all operators who participate in a tourism partner program such as those offered in Norfolk and Elgin Counties. Through these programs the tourism operator pays a fee to participate in the tourism partner program and is rewarded for becoming more engaged with the tourism office and its programming with a lower fee for tourism related signage.

Haldimand County has been approached by tourism operations in adjacent communities that would like to participate in their signage program. The County may want to consider adopting Wellington County's approach and charging a higher fee for out of County businesses. Wellington County charges out of County businesses an additional \$135 for a three-year term.

## Eligibility

Haldimand County's eligibility criteria is in line with neighbouring jurisdictions with one exception. The other jurisdictions all require a reception structure consisting of a controlled gate, staffed reception, orientation point or permanent panels or displays.

## Eligible Business Types

Haldimand County may want to consider the following amendments to the types of businesses eligible to participate in the pay to play program.

## Additions

- Bicycle rentals
- Casinos
- Farm-based tourist attractions
- Outfitters
- Tourist Routes

## Revisions

- Change Raceways to Racetracks (horse, motor or go-cart)
- Expand Shopping and Tourist Districts to include Rural Downtowns

# 3. Support Signs

## Information Kiosk

### Function

- Information panel or kiosk to supply pedestrian based directional information to pedestrians via an integrated map.
- Directories support economic development by highlighting local destinations that are included in the wayfinding system.
- Optional community information could include emergency information; trail details; supplemental information, interpretation info. etc.

Figure 19: Trail Information Kiosk Support Signage Illustration

Figure 18: Trailhead Information Kiosk Adaption Support Signage Illustration

- Advertising information is not recommended due to necessary on-going maintenance and management.

#### Location

- To be located at pedestrian gathering places associated with parking areas, trailheads, pedestrian connections, or main entrances to a designated destination area, or at an outdoor area associated with an information centre.

#### Design Considerations

- Trailhead Information Kiosks could be integrated with trail Identification signage to limit sign clutter.
- As a static feature, the kiosk can provide QR codes for more information.
- Can be single or multi sided.
- Include a 'you are here' marker on maps to aid in orientation.
- Map zone to accommodate information within a comfortable walking distance from the kiosk (400 – 800m radius).
- If possible, maps should be oriented 'true' to the viewer's perspective of the map. If the map has north at the top of the panel, the viewer should also be looking northward as they view the map.
- Maps to include road names, natural features and destination names to help with orientation.
- Pedestrian oriented Information Kiosks in Haldimand County will support pedestrian wayfinding in its urban/downtown environments and should be coordinated with vehicular directional signs in efforts to promote efficiency and limited signage clutter.
- For the purposes of the Signage Strategy, information kiosks have been divided into 'pedestrian' (located in non trail situations such as a parking lot, park, plaza) and 'trail' kiosks (located at the beginning of a designated trail).
- Existing Trail Information Kiosks are present at many trailheads. These kiosks should be maintained until replacement is required. Opportunity for amendment in terms of colour would reinforce new branding efforts. Interpretive panels should be updated to reflect appropriate and relevant information in regard to context and trail locations, attractions, etc. Maps should be aligned with Haldimand County trail maps. Trailhead Information Kiosks located at Grand River Access Points should incorporate guidelines for sign design from the Grand River Style and Signage Guide. Refer to Sign Design and Style Overview: The Basics on page 32 for more information.

#### Applications

Examples of Information Kiosks include:

- Trailhead Information Kiosks
- Tourist Information Kiosks
- Grand River Information Kiosks

## Storyboard, Interpretive or Commemorative Panel

### Function

- Used to support community initiatives, heritage information, or specific natural, cultural or historic interpretation.
- To commemorate, celebrate or highlight community groups, and/or donors responsible for a specific community facility via the Community Partnership Projects.
- Provides an understanding of the purpose and history of the place by telling a story through text and images.
- Information could include place identification, descriptions, history, operational hours (if relevant) donors, alerts, etc.

### Location

- To be located adjacent to intended vignette, historical marker, or place.
- Should be accessible regarding access and legibility to all user groups (i.e., follow AODA guidelines for accessibility).

### Design Considerations

- Formats include table-top mount, vertical stand alone sign panel, or wall mount.
- Opportunity to integrate technology through a QR code or other touring app.
- Can include text, images, graphics, and maps.
- All signs in this category should be similar in composition and layout as per the sign templates recommended.
- All signs should include the Haldimand County identifier/logo, the name of the donor or community group involved, the HC wave band, HC brand fonts, and a title of the project.
- As an interim modification, for signs in good repair, a temporary cover up sticker could be used to cover the retired (old) Haldimand County logo.
- Opportunity for variation in regard to sign size and shape, base colour, and creative content.
- Many storyboards are currently installed at various parks, landmarks and community attractions, and are funded in entirety by the community. As the storyboards decline, the new sign style should become the standard for replacement.
- Criteria should be developed to guide the types of information to be included on a public storyboard to ensure that the content is appropriate for public viewing.
- Design of the storyboard should be developed and presented for consideration by the Community Group applying for the installation of the storyboard.

Figure 20: Interpretive Panel Support Signage Illustration

- Storyboards and interpretive panels are signs that would be included in Heritage Signage, Community Group Signage, and any program that supports interpretive educational information.

#### Applications

These signs would take precedent over existing Community Group signs, Heritage Story Boards, or interpretation panels.

### Event Signs - Optional

#### Function

- Stand alone sign (separate from gateway sign or other identification signs) to inform visitors (usually drivers) of yearly seasonal events.

#### Location

- Located at or near the entrance of settlement areas, along major routes, after the gateway sign.
- To be included as needed to support existing tourism and community events.

#### Design Considerations

- Flexible, removable messaging panels or 'blades' to support inactive events or seasonal change.
- To include standard yearly events with dates that support significant tourist activity.
- Coordinate event signs for communities that support larger tourism and community events.
- Guidelines for eligibility should be considered prior to inclusion.
- The event sign could be managed in a similar fashion to the 'Pay to Play' program with yearly, or suitable term, application process and associated fees.

Figure 21: Seasonal Events Support Signage Illustration

#### Applications

These are new optional signs proposed for Haldimand County.

### Heritage Designation Signage

There are many historical markers located at various commemorative sites and heritage buildings throughout Haldimand County. These 'markers' have a distinct character that support the historical nature of their location. Mostly engraved or pressed metal fabrication, the markers usually include the Heritage Haldimand (HH) logo, with a few newer installations including the old Haldimand County logo. It is the recommendation of this strategy that new

historical markers continue with the same design, including a Historical Haldimand logo and the new Haldimand County logo.

### Historical Plaques

These existing older signs are a type of directional sign that informs the user of an upcoming turn leading to a historic site. The Haldimand GIS signage inventory identifies 1 such sign (#223 – directing to Nelles Settlement site) but there may be others. It is the recommendation that if these signs are in a state of disrepair (this sign has peeling paint) and do not support the current list of approved destinations, they should be removed. Destinations that are supported by the signage strategy will be included in the new wayfinding directional signs.

### Community Group Acknowledgement - Optional

Typically, Community Groups have been involved with various amenity and beautification projects and associated signs in Haldimand County through the Community Partnership Program. Storyboards and Interpretation panels offer this acknowledgement opportunity if included as part of the project. However, not all amenity and beautification projects include a storyboard or interpretive panel. Various sign types are better suited to including messaging space for Community recognition via a message tag line such as 'Proudly Supported by'.

Sign types that would best be suited to include Community Group acknowledgement are the Destination Identification Signs, or Support Signs (kiosks, storyboards, interpretive signs). Group or incremental participation presents acknowledgement challenges. Alternatively, recognition could be considered on the County Website under the respective destination, or in the Community Information tab.

# Sign Design and Style Overview: The Basics

## Haldimand County Branding and Logo

While it is a primary goal for the Haldimand County Signage Strategy to embrace and promote new branding efforts, it was felt necessary to limit the inclusion of the logo itself on the signs to maintain longevity in the system. The strategy, in line with the Haldimand County Corporate Branding Guidelines includes the following recommendations to promote integration rather than including commitment to the logo itself. The graphic logo (Figure B) wave detail, (Figure D) word mark (Figure G), colour and font have been proposed as methods of supporting Haldimand County branding.

These elements are proposed for use as follows:

### Graphic Logo

The use of the Haldimand logo in its entirety (Figure A) is being proposed for limited use in this strategy as a means to prolong the lifespan of the new signs. To reinforce and continue the sequence established with the new welcome signs currently located outside of the County, the new Haldimand County logo is recommended for use on all County Gateway signs. Optional event signs also include the Haldimand County graphic as a means to enliven these celebratory signs. Other wayfinding, identification and support signs will make use of some of the logos elements.

### The 'Wordmark' and Haldimand County Text

A simple 'Haldimand County' identifier (Figure G) is used as supportive header or footer for settlement identification signs, and for signs located in rural areas that are not associated with a particular town or settlement area. Additionally, the Haldimand County 'Wordmark' (Figure E) is proposed for use on information kiosks and storyboards.

### Wave Detail

The translucent wave silhouette (Figure C) provides a subtle visual connection to the Haldimand County logo and supports County branding. The wave should not be used in conjunction with the logo to limit visual clutter on the sign. Use of the wave band is limited as an overlay on the message panels (Figure D) at max. 25% transparency to ensure that there is no visual conflict with the primary messages. It is also used at the bottom of the message panels to provide a base or platform for the messages above.

Figure A

Figure C

**Haldimand  
County**

Figure E

Figure F

Figure B

Figure D

**Haldimand County**

Figure G

### Colour

The Haldimand County branding uses blue, yellow and grey/black as their primary colours, with green and light blue as secondary colours. The signage strategy recommends blue RGB 0-112-186 as the primary colour for the proposed signs (good contrast with white letters, and integrates well with other standard road signs). Green (RGB 86-135-51) is proposed as an alternative for signs identifying parks, trails, routes, recreation and open space destinations. Support colours for the system include deep midnight blue (RGB 22-31-70) dark green (RGB 17-59-29) and dark grey (Pantone 433U).

Directional Signs &  
Civic & Cultural destination  
Identification

Green Message Banners:  
Trail and Route Directional  
Signs, & Recreational, Open  
Space, Trails and Park  
destination Identification

### Font

The strategy recommends use of the following font styles. It is expected that the sign fabricator will provide the specified font as noted on the design intent drawings. Font sizes (relative to associated road speed allowance) are noted on the design intent drawings.

- Clearview Highway (an MTO standard) is the preferred font for messages on vehicular directional signs. Note: The illustrative sign sketches substitute Highway Gothic font as demonstration for Clearview Highway.
- Montserrat is proposed for secondary messages (Community or district identification, titles, headings) and for pedestrian level information kiosks, storyboards and interpretive panels.
- Caveat is the recommended font for tag lines (e.g. 'Proudly supported by,' welcome messages etc.)
- Calibri font should be used as a standard text fonts for descriptive paragraphs (as found on storyboards, interpretive panels etc.)

# Sign Design and Style Overview: Other Considerations

## Grand River Access Points

There are 9 Grand River Access Points in Haldimand County. Most of these access points are integrated with an established park or boat launch site, already identified as key destinations within the Haldimand County Signage Strategy. The Grand River Style and Signage Guide provides graphic guidelines for signage that will provide consistent and uniform identity for all access points along the Grand River watershed. It is the request of the Grand River Conservation Authority and associated Tourism agencies that the residing County of these river access points coordinate their signage with the Grand River Sign Style guide. The guide does not include recommendations to include or acknowledge the participating County or settlement area in which the park resides. It is the recommendation of this strategy that new signage at the 9 Grand River Access Points incorporate Haldimand County branding to fortify these access points as Haldimand County assets.

Signs types that will be influenced by the Grand River Style Guide will be those that address watercraft users along the Grand River, people driving to the access point to embark on the river, and those requiring information about the river and associated trails and other local amenities. These include place identification signs, information kiosks, and directional signs guiding watercraft users to access points along the river.

It is the recommendation of this strategy that signs within these access sites integrate the Haldimand County name, the name of the park , the river access point number and the Grand River logo. This strategy provides integrated sign designs that compliment both the Haldimand County branding and the Grand River Style and Signage Guide.

### Existing Signs in Access Point Sites:

For consideration, existing park identification signs in good repair could be modified with a simple banner addition to include the Grand River branding and access point number. As park identification signs approach the end of their lifespan and are in need of replacement, new park signs should integrate Haldimand County branding with the proposed River Access Park identification sign design.

Existing information kiosks within access point sites should include information for Grand River users that inform them on where they are along the river, information on the access site and any other amenities that may be of interest.

Rural, Urban, & Local Vehicular

Support Signs

Optional Signs

## HCCSS Sign Type Focus

The prescribed Comprehensive Family of Signs provides many sign types, suited to the abundant circumstances that could benefit from new and/or improved signage, throughout the County.

To ensure implementation of the HCCSS is attainable, remains malleable into the future, and stays true to the scope of work, only a selection of sign types will be referred to for the remainder of this report (i.e., throughout Messaging Chart, Sign Location Mapping and Budgeting). As the most abundant, and arguably most important, sign types prescribed, they will compose the backbone of the Haldimand Signage System (HSS). For illustrations of each of sign type listed below, refer to Family of Signs: Preferred Concept on page 35.

### Gateway

#### GV Gateway Vehicular

For gateway signs located on a roadway, at the boundary of either the County or a settlement area.

#### GW Gateway Watercraft

For Gateway signs located on the Grand River, at the boundary of the County.

#### GA Gateway Active

For Gateway signs located on a trail as it passes over the boundary of either the County or a settlement area, if applicable.

### Directional

#### DVR Directional via Vehicular Rural

These signs are located on rural roads and highways with travelling speeds of 80km/hr. The rural landscape character is more open, with bigger view sheds. A larger sign will be in scale with this type of rural landscape character.

#### DVU Directional via Vehicular Urban

These signs are located in urban areas with slower travelling speeds of under 80km/hr. This landscape is more developed with buildings and amenities closer to the roadway. A smaller sign type is better suited to this busier, more urban landscape.

#### DVL Directional via Vehicular Local

These signs are located on side streets and neighbourhoods where speeds are often under 50km/hr. More residential in nature, with a more private feel, smaller directional signs will not be out of place and fit into this 'local' landscape appropriately.

#### DW Directional via Watercraft

These directional signs are located along the Grand River, and speak to watercraft, alerting users of the next Grand River Access point and/or boat launch area. Sign graphics to be coordinated with the Grand River Style Guidelines.

## Messaging Chart & Sign Location Mapping (GIS)

The Messaging Chart contains all information pertinent to each sign, whether proposed or installed, in the Haldimand Signage System. Messaging charts are to be used in conjunction with sign location mapping. The Sign Location Mapping illustrates the approximate location of each sign in the Haldimand Signage System. These tools will be vital for implementation and for ensuring the Haldimand Signage System remains safe and effective.

It should be noted that the Messaging Chart and Sign Location Mapping are tools intended for internal use only.

At the request of Haldimand County, the Messaging Chart and Sign Location Mapping have been recorded and will be maintained via ArcGIS Software. Benefits to this practice include:

- Improved communication
- Improved efficiency
- Better management
- Easier decision making
- Easier progress tracking

## Login Credentials

The HCCSS Implementation Team will view this information via ArcGIS Software. To obtain login credentials and further instruction on accessing/using the software, members are to reach out to the appropriate GIS representative from the Haldimand County Planning & Development Division.

## Updating Information

Information will need to be updated periodically, as proposed signage is reviewed, installed, and inspected. The HCCSS Implementation Team will be responsible for coordinating these updates with the appropriate GIS representative from the Haldimand County Planning & Development Division.

For more information on this process and the responsibilities of the HCCSS Implementation Team, refer to Implementation How-To Guide on page 56.

## Messaging Charts

The *attribute table* is where all HCCSS data will be recorded and maintained. Each row contains information pertinent to one (1) sign in the Haldimand Signage System. The following table demonstrates the general layout of the Messaging Chart, developed via ArcGIS Software. Each column heading has been defined below.

Object ID	Sign Type	Direction(s)	Destination(s)	Optional Msg Symb	Mounting Type	Settlement Area	MTO Jurisdiction	XCoord	YCoord	Circuit	Year Installed	Year Inspected	Rating	Field Notes

#### Object ID

A unique number, generated by ArcGIS Software, to identify each row (i.e., sign) in the attribute table.

#### Sign Type

Refers to the sign type. For more information on sign types, refer to Comprehensive Family of Signs on page 17.

#### Direction(s)

Captures the navigational messaging (i.e., arrows indicating direction of travel) to be included on the sign.

#### Destination(s)

Captures the destination messaging (i.e., destination names) to be included on the sign.

**Note:** The information provided captures full destination names, as provided by the HCCSS Project Management Team. Due to character limits determined by the physical sign size and font size, destination names will need to be amended to be accommodated on signage. In this instance, the HCCSS Implementation Team will be responsible for determining an appropriate abbreviation, that will remain consistent throughout the entire Haldimand Signage System. For more information on this process and the responsibilities of the HCCSS Implementation Team, refer to Implementation How-To Guide on page 56.

#### Optional Message Symbol

Captures whether amenity symbols (i.e., symbols illustrating amenities available at destination) are to be considered for inclusion on the sign.

**Note:** This column has been intentionally left blank. The HCCSS Implementation Team will be responsible for populating this data, following the Refine & Prepare stage of implementation. For more information on this process and the responsibilities of the HCCSS Implementation Team, refer to Implementation How-To Guide on page 56.

#### Mounting Type

Refers to the mounting type (i.e., method of installation and supporting infrastructure) of the sign. Note: This column has been intentionally left blank. The HCCSS Implementation Team will be responsible for populating this data, following the Approve & Record stage of implementation. For more information on this process and the responsibilities of the HCCSS Implementation Team, refer to Implementation How-To Guide on page 56.

#### Settlement Area

Refers to the settlement area in which the sign is to be located.

#### MTO Jurisdiction

Refers to whether the sign location falls within MTO jurisdiction. For more information on signage within MTO jurisdiction, refer to Implementation How-To Guide on page 56.

#### XCoord

The x coordinate value, generated by ArcGIS Software, to identify the approximate location of the sign. This value allows for signage to appear on the Sign Location Mapping.

Note: All coordinates are approximate. The HCCSS Implementation Team will be responsible for reviewing all locations to accept proposed signage, during the Refine & Prepare stage of implementation. For more information on this process and the responsibilities of the HCCSS Implementation Team, refer to Implementation How-To Guide on page 56.

#### YCoord

The y coordinate value, generated by ArcGIS Software, to identify the approximate location of the sign. This value allows for signage to appear on the Sign Location Mapping.

Note: All coordinates are approximate. The HCCSS Implementation Team will be responsible for reviewing all locations to accept proposed signage, during the Refine & Prepare stage of implementation. For more information on this process and the responsibilities of the HCCSS Implementation Team, refer to Implementation How-To Guide on page 56.

#### Circuit

Refers to the wayfinding circuit in which the sign belongs. For more information on wayfinding circuits, refer to the Implementation How-To Guide on page 56.

#### Year Installed

Refers to the year in which the sign was installed. If this field is blank, the sign is considered proposed (i.e., it has not been installed yet).

Note: This column has been intentionally left blank. The HCCSS Implementation Team will be responsible for populating this data, following the Approve & Record stage of implementation. For more information on this process and the responsibilities of the HCCSS Implementation Team, refer to Implementation How-To Guide on page 56.

#### Year Inspected

Refers to the year in which the sign was last inspected. If this field is blank, the sign has not been inspected.

Note: This column has been intentionally left blank. The HCCSS Implementation Team will be responsible for populating this data, following the Approve and Record stage of implementation. For more information on this process and the responsibilities of the HCCSS Implementation Team, refer to Implementation How-To Guide on page 56.

#### Rating

Refers to the status of the sign upon last inspection. If this field is blank, the sign has not received a rating (i.e., it has not been inspected).

Note: This column has been intentionally left blank. The HCCSS Implementation Team will be responsible for populating this data, following the Approve and Record stage of implementation. For more information on this process and the responsibilities of the HCCSS Implementation Team, refer to Implementation How-To Guide on page 56.

#### Field Notes

An optional column to record additional observations made on site during installation/inspection.

Note: This column has been intentionally left blank. The HCCSS Implementation Team will be responsible for populating this data, if necessary, following the Approve and Record stage of implementation. For more information on this process and the responsibilities of the HCCSS Implementation Team, refer to Implementation How-To Guide on page 56.

#### Messaging Chart Example Copy

The following is a copy of the Messaging Chart that can be accessed via ArcGIS Software. Exported on June 30, 2022, this is an example copy only, intended to demonstrate the data for the purpose of this report.

For up-to-date information, and to make adjustments, refer to the instructions found earlier in the report to access the Messaging Chart via ArcGIS Software.

## Sign Location Mapping

Sign location mapping is a visual tool, illustrating the approximate location of each sign in the Haldimand Signage System. ArcGIS Software allows users to select features (i.e., signs) on the mapping to learn more about them. Upon selection, the attribute table (i.e., Messaging Chart) entry specific to that feature will open.

The following screen captures contain a preview of the Sign Location Mapping, accessed via ArcGIS.

## Budgeting

The following high-level (i.e., does not cover explicit detail) budget charts represent the estimated cost for installed signs for each community. Sign quantities and types are coordinated with associated Messaging Chart & Sign Location Mapping, as applicable. Estimated unit costs are standards for a conservative sign (i.e., post, basic panel, armature, and installation). Additional costs associated with delivery, engineering, traffic control, etc. are not included in the unit estimate.

### Sign Types Included in Budget

<b>DVU</b> Directional via Vehicular Urban*	<b>GA</b> Gateway Active*
<b>DVL</b> Directional via Vehicular Local*	<b>ID</b> Destination Identification (Parks)
<b>DVR</b> Directional via Vehicular Rural*	<b>IDW</b> Destination Identification (at Waterfront)*
<b>DW</b> Directional via Watercraft*	<b>IK</b> Information Kiosk*
<b>GV</b> Gateway Vehicular*	<b>TIK</b> Trail Information Kiosk*
<b>GW</b> Gateway Watercraft*	

Note: Destinations with an asterisk (\*) have been included on Sign Location Mapping (GIS). Those without, have been included in this budgeting exercise only, at the request of the HCCSS Project Management Team.

Rural	\$7,000.00
Total:	<b>\$976,750.00</b>

## Chapter Two: Implementation How-To Guide

## Implementation How-To Guide

Now that the HCCSS is complete, the County can begin implementing the proposed additions, replacements, and removals of signage throughout the Haldimand Signage System. This section is intended to guide the County in this process. The following flowchart provides an overview of the recommended stages of implementation.

## 1. Establish the Team

The first stage of implementation is the establishment of the HCCSS Implementation Team. This multi-disciplinary team will be responsible for all correspondence, coordination, tasks, monitoring, and record keeping, related to the Haldimand Signage System moving forward. More information on specific roles and responsibilities will be outlined in this section.

The existing HCCSS Project Management Team (members have been listed in the Opening Remarks of this document) is responsible for the establishment of the Implementation Team. Members of the HCCSS Project Management Team may fulfill positions on this new team.

It is expected that members of the Implementation Team remain in their respective roles. If a member is no longer able to participate, they should coordinate with the rest of the Team to ensure their duties are fulfilled by other members, or another suitable individual.

### Roles & Responsibilities

#### Project Manager

An individual responsible for overseeing the implementation process. They will need to:

- Have a thorough understanding of the Haldimand County Signage Strategy and act as the main contact for all inquiries related to the HCCSS and implementation.
- Coordinate the HCCSS team and ensure all roles/responsibilities have been assigned.
- Present budgets and reports to Council, as required.

#### Project Coordinators

A team of individuals responsible for completing a selection of tasks related to the implementation process. Team members could include, but are not limited to, representatives from the following divisions:

- Public Works Operations
- Roads Operations
- Innovation & Technology Services
- Economic Development & Tourism
- Facilities, Parks, Cemeteries & Forestry Operations
- Planning & Development
- Community Development & Partnerships
- Customer Experience & Communication

The total number of project coordinators is up to the discretion of the Project Manager and will be dependant on workload and staff availability. Our recommendations include a broad representation of divisions, some of which may not yet have been consulted on this project. We urge the Project Manager to consider all divisions that may be impacted by / involved in the project, to ensure effective communication and implementation.

#### Summer Students

Several tasks may also be conducted by summer students, if available, under the supervision of the appropriate Project Coordinator.

#### Allocating Tasks

Once the Implementation Team has been established, an inaugural meeting is to occur with the entire Team. This meeting is to:

- Establish clear communication amongst the Team.
- Review the HCCSS and ensure understanding of its contents.
- Allocate responsibilities and tasks to each member.

## 2. Plan Ahead

The next Implementation Team meeting(s) will aim to create a plan for all future implementation efforts. This meeting is to:

- Set implementation goals and objectives
- Determine County priorities
- Phase implementation accordingly
- Prepare an implementation master plan (capturing 1-year, 3-year, 5-year, and 8-year terms)

This stage should be revisited following the completion of each fiscal year and/or completion of an implementation phase. Additional topics that may be addressed include:

- Budget opportunities/restrictions
- Priorities shifting
- Incorporating incomplete tasks into a later phase
- Shifting the implementation process based on past success and/or concerns
- Monitoring past installations and addressing warranty concerns and/or issues

### Phasing

Rarely will a comprehensive signage system be implemented in a single year. Instead, breaking implementation efforts into phases allows the County to allocate reasonable annual funding and can make the associated tasks (i.e., messaging review, location review, permitting, etc.) less daunting. No two counties will approach phasing the same way; unique budgets, available resources, and existing processes are all contributing factors. When phasing efforts, the following topics should be considered:

- Priorities
- Wayfinding Circuits
- Removals
- Budgeting & Council Approval

### Priorities

Determining priorities is a good place to get started. We recommend the team consider the following (in no particular order) when establishing priorities:

#### Gateways

Haldimand County has already installed a new gateway sign on Hwy 403, featuring the new logo and branding. County gateways are a great location to unveil new branding efforts, demonstrating progress, civic pride, and a new look. Installing new gateway signage to create a

uniform entry experience, and provide context for other new signage, could be a priority. Additional gateway sign locations have been proposed and are found on the GIS.

#### Equitable Distribution

Haldimand County is comprised of many communities that would benefit from the installation of new signage. Installing 'choice' signage throughout several communities in each phase, to ensure equitable distribution, could be a priority. Alternatively, seeing implementation to completion in a single community before moving on to another, to increase efficiency and demonstrate success to Council, could be a priority. The latter approach has been utilized in other County projects, such as the Haldimand County Downtown Street Planting Design and Installation.

#### Problem Areas

Addressing areas that cause the most confusion and/or reduce user satisfaction, could be a priority.

#### High-ranking Destinations

Signing high-ranking destinations, to promote these desirable assets, could be a priority. In this case, choosing wayfinding circuits with the largest number of high-ranking destinations could be worthwhile.

#### Identifying Assets

Identification signage is integral to the success of a comprehensive signage system; users need to know that they have arrived at the desired destination. Ensuring destinations have effective identification signage, in good repair, placed without visual obstruction, could be a priority.

#### Site Safety & Suitability

Destinations should be ready to receive visitors before they appear on signage. Ensuring that included destinations are aesthetically pleasing, safe, and 'open for business', could be priority.

#### Signs in Disrepair

Existing signage throughout the County varies in age and condition. Removing and replacing signage in disrepair, could be priority. Complementary to this effort, leaving signage that remains in good condition, and displays accurate information, to be removed in later phases, could be worthwhile.

#### Civic Pride

New or recently renovated destinations should be celebrated. Ensuring these destinations have new identification signage installed before opening (during construction activities), could be a priority.

#### Development Planning

Ensuring all upcoming community projects (e.g., trailhead establishment, parking lot improvements, new parks and recreation facilities, etc.) incorporate appropriate signage during the design development phase, could be a priority.

### Budget Utilization

Ensuring Council approved budgets are used to their full potential, could be a priority. In this case, choosing wayfinding circuits that collectively reach the highest dollar value, without exceeding the budget could be worthwhile.

### Alternative Technology

Visitors may use alternative technology (e.g., Google Maps) in conjunction with physical wayfinding signage to reach their destination. Coordinating alternative technology to support physical wayfinding can be done in many ways. A low-cost, yet effective method is ensuring County destinations are searchable on online mapping platforms, such as Google Maps, and that the online spelling aligns with messaging on County signage. Further, ensuring destinations are listed online with an accurate address can mitigate conflicting directions being provided by an online mapping platform versus those shown on signage.

Coordinating alternative technologies to align with the comprehensive signage system, could be a priority. In this case, allocating a portion of the Council approved budget towards acquiring and updating this technology could be worthwhile.

### Sign Prototype Trial

Ensuring new signage meets the needs of users, by installing limited quantities of each sign type, before investing in additional copies, could be a priority. In this case, choosing wayfinding circuits with less total signage, and higher sign type diversity, could be worthwhile. This would allow the County to ‘test drive’ sign types, and adjust, if necessary, without significant loss.

### Wayfinding Circuits

When a destination is introduced on a sign, it is crucial that the remainder of the route is signed accordingly, until the destination is reached. This practice ensures users can reach their destination without interruption and/or confusion. As individual signs often contain multiple destinations, those additional destinations, and associated routes, will also need to be signed from that point through to the destination. These signs, dependant on one another, collectively make up a wayfinding circuit. Wayfinding circuits often contain several sign types.

With careful messaging and route selection, a comprehensive signage system can consist of many wayfinding circuits, working independently from one another. Wayfinding circuits are important as they provide opportunity to phase implementation, without interrupting routes and/or hindering the success of the signage system.

Some circuits can be divided into small wayfinding end-circuits. Located in close proximity to a destination (or a few destinations), they are a part of a larger wayfinding circuit, but do not rely on the larger circuit to function.

All HCCSS proposed signage has been classified into the respective circuit, to assist the team in phasing efforts. For more information on accessing this information, refer to Messaging Chart & Sign Location Mapping (GIS) on page 39.

#### Example

An example wayfinding circuit within the HCCSS is Circuit AH; a small collection of signs located in Nanticoke. Consisting of signs 44, 45, and 49, this circuit is intended to direct visitors to Nanticoke Community Hall. Signs 44 and 45 catch visitors approaching Nanticoke from the north/east and direct them towards the hall. Sign 49 then guides visitors to turn left, the final step required to reach their final destination. While a relatively small and simple example, Circuit AH demonstrates how individual signs work together, and rely on one another. In this case, without sign 49 to complete the circuit, signs 44 and 45 would cause confusion amongst users.

#### Removals

Removing old signage is an important part of implementing an effective signage system and should be included in each phase as necessary. This practice will reduce sign clutter, mitigate confusion among users, and maintain an inviting appearance. The HCCSS proposes that all existing signage eventually be removed. We recommend the team consider the following when planning removals:

##### Coordination with Sign Installation

Removing existing signage as new signage is installed is a good way to tackle removals. This one-for-one approach can reduce the number of trips to each location and allows for predictable budgeting. Caution is advised as not all existing signs slated for removal will have a one-for-one replacement. These instances will require extra attention to ensure they are not missed.

##### Obsolete Signage

The implementation of the HCCSS will see several signs become obsolete, with no proposed replacement. Removing these signs could be a priority.

#### Budgeting & Council Approval

Annual budgeting is arguably the most significant consideration when phasing. Without adequate funds, implementation cannot occur. To secure funding, the Implementation Team will need to seek approval from Council.

##### Preparing Budgets

To aid the Implementation Team in preparing annual budgets for Council approval, this document contains estimated unit pricing for each sign type and estimated pricing for each complete wayfinding circuit.

#### Seeking Council Approval

The Project Manager will be responsible for submitting the proposed annual budget, and supporting materials, if necessary, to the Economic Development and Tourism Manager each year.

#### Revisions to Suit Approved Budget

If Council does not allocate sufficient funding to HCCSS implementation, the Team will need to revisit proposed phasing and adjust as necessary.

### 3. Refine & Prepare

With Council approval and funding secured to support the proposed phase, it is time to refine materials and prepare for installation. The following tasks will ensure everything is in order before procurement:

- Confirm messaging
- Confirm locations
- Obtain approvals, if required

#### Confirm Messaging

Messaging refers to the content displayed on each sign. Messaging for each proposed sign in the Haldimand Signage System has been prepared. For more information on accessing this information, refer to Messaging Chart & Sign Location Mapping (GIS) on page 39. It is the responsibility of the Project Coordinators to:

- Conduct a thorough review of all proposed messaging, applicable to the current phase
- Abbreviate destination names, as necessary
- Confirm messaging is organized appropriately
- Ensure messaging is consistent and directions are accurate
- Update GIS records to reflect all revisions made during this process

Confirming messaging prior to tender will help to prevent errors during tender and installation.

#### Abbreviate Destination Names

To ensure signage is legible and space is used effectively, it is highly recommended that destination names fit available space appropriately. The number of characters in a destination name is dependant on vehicular speeds, associated font size, and panel size. Refer to the design intent drawings to determine the space allowance for destination names. For example, for directional urban signs, each destination that appears on a sign is to be limited to thirteen (13) characters. A space between words counts as a character. Kerning (tightening of letter width) is permissible to accommodate one or two more characters.

#### Order of Messaging

Order of messaging on a sign begins with destinations that require a maneuver to the left, followed by destinations that require a maneuver to the right, then destinations that require no maneuver (straight ahead).

Where there are multiple destinations requiring the same maneuver, destinations are to be ordered according to distance from sign location, beginning with the nearest. Where there are multiple destinations requiring the same maneuver, at equal distance from the sign location, destinations are to be ordered alphabetically.

Vehicular-oriented signage should carry no more than five destinations to allow for adequate time to read and process information. If a destination has been introduced on a sign, it must be included in the messaging of all remaining signs on the route until the destination has been reached.

#### Ensuring Consistency

It is important for the HCCSS Implementation Team to commit to specific message names to ensure that there is consistency from one directional sign to the next. Once established, this should become the standard from sign to sign, and should be continued from one phase to the next. It is also important that similar generic destinations have the same name from settlement area to settlement area.

#### Symbol Selection

Symbols are often used throughout wayfinding signage as a supplementary form of messaging. Symbol use can be advantageous, as illustrations can convey many amenities using less space than the equivalent terms. Additionally, symbols can often be interpreted by non-English speakers. As illustrated in earlier in this report, several sign designs provide opportunities to include symbols.

It is the responsibility of the Implementation Team to approve a set of symbols for use throughout the County. Further, the Implementation Team is to identify all (if any) symbols that will be utilized for each destination included in the signage system. All symbols should be reproduced from original electronic artwork. Production files for required symbols shall be provided by the client.

Symbols are to be general in appearance. Site specific symbols/logos should not be created or used on wayfinding signage (e.g., Kinsmen Park may precede general washroom, picnic area, and swimming symbols. The messaging “Kinsmen Park” should not be replaced by a symbol).

Note: Some of the standard icons used by the province may be subjected to copyright (including but not limited to Farmer’s Market, Winery, and organizational logos such as Provincial Parks).

#### Sign Location Mapping Review

Sign Location Mapping has been provided via ArcGIS Software. The Implementation Team will need to conduct a thorough review of this mapping, to ensure logical placement. For more information on Sign Location Mapping, refer to Messaging Chart & Sign Location Mapping (GIS) on page 39.

## Confirm Locations

Upon completion of the Sign Location Mapping Review, the Implementation team will be responsible for visiting each proposed sign location to ensure suitability. The following considerations should be made when determining site suitability.

### Placement Guidelines

Generally, these guidelines should be considered when verifying site suitability and placement:

- Do not install signage within 15m of a traffic safety sign, if present.
- Signage should be located on the right shoulder, unless conditions dictate otherwise.
- If site conditions are not suitable for the placement of signage (e.g., cliffs, out-of-view sharp turns, etc.) signage may be eligible for placement on median or in turning median.
- Signage should be placed to avoid visual obstructions due to existing elements (e.g., trees, signs, banners, hanging flower baskets etc.).
- Do not install signage within a 9m site triangle of an intersection, parking lot egress, or driveway.
- Signage is not to be installed on existing structures and/or hydro poles.
- Adjust sign locations to suit sub-utilities. Utility locates are to be completed prior to installation.

Note: Guidelines are not a substitute for good judgement.

The Implementation Team should also reference the [Haldimand County Design Criteria; Section N Signs](#) and the [Ontario Traffic Manuals](#) for additional insight on placement and installation requirements.

## Mounting Offsets

Directional Sign Panels located in areas with a raised curb and pedestrians are subject to the following:

## Mounting Offsets

Directional Sign Panels located in areas with a raised curb (without pedestrians) are subject to the following:

## Mounting Offsets

Directional Sign Panels located in areas without a raised curb and without pedestrians are subject to the following:

## Sign Rotation

## Obtain Permitting

The Implementation Team is responsible for reviewing and acquiring approvals from the County, the Ontario Ministry of Transportation (MTO), and/or other regulatory agencies, as required.

### MTO Jurisdiction Signage

The Ontario Ministry of Transportation (MTO) is responsible for many highway corridors throughout the province. Highway corridors within MTO jurisdiction are subject to regulations and permitting. As some of these regulations and permitting policies relate to signage, it is imperative that the HCCSS Implementation Team familiarizes themselves, adheres to them, and obtain all permits, as required.

There are two provincial highways, under MTO jurisdiction, that cross Haldimand County:

- Highway ON-3
- Highway ON-6

Generally, all signage within 400m of any limit of a provincial highway (MTO Permit Control Areas) requires a MTO issued permit. The MTO Permit Control Area could also include signage intended for users of roadways adjacent to, or intersecting, provincial highways.

The [\(2022\) Highway Corridor Management Manual](#), or latest, published by the Ministry of Transportation should be used as an official resource for signage slated for MTO Permit Control Areas. This document provides useful information such as:

- Policies, standards, and requirements for installing signage within MTO Permit Control Areas
- MTO sign types and classifications
- Official setbacks and special circumstances
- Fee calculations
- Other sign-related procedures

## 4. Tender & Install

Once materials have been refined and prepared, and permits obtained, the next stage will be to initiate the procurement process. The Implementation Team is responsible for coordinating with the County Division responsible for procurement, to initiate the process, and prepare materials, as necessary. The following are general recommendations and considerations and are not intended to replace the County's procurement standard documents.

As an ongoing, phased project the selection of a responsible and experienced contractor is integral to the success of the Haldimand Signage System. The following considerations should be made when preparing procurement documents related to the fabrication and/or installation of signage.

### General

It is recommended that a contractor be retained with a renewable annual agreement at the discretion of the County. This will ensure:

- Consistency in standards
- Maintain quality control
- Allow for easier monitoring

### Bidding Process

A Request for Quotation (RFQ) will initiate the bidding process, in search of a qualified contractor. Haldimand County will have standard procurement procedures that should be followed. Based on industry best practice and the nature of this project, we recommend the following items be included in the RFQ:

- Relevant information from the HCCSS (e.g., Messaging Chart & Sign Location Mapping, sign standards and design intent drawings, associated details, etc.).
- Clear, scalable, digital copy of the official Haldimand County logo.
- Unit price schedule, with installation and warranty costs separated
- Unit price schedule, with prototype sign development costs
- Unit price schedule, with optional provisional unit cost to accommodate alternative materials, manufacturing techniques, and mounting options.
- Provisions for permitting, insurance, bonding, WSIB, etc.
- Request for examples of previous sign work with references.
- Request for shop and as-built Drawings

### Provisional Pricing

As a provisional item, the Contractor should have the option to provide alternative pricing for materials, manufacturing techniques, and mounting options, other than those specified in the

HCCSS. If the Contractor chooses to submit provisional pricing, they should also provide an explanation of differences in pricing, performance, and quality, between those specified and their proposed alternatives.

#### Shop & As-Built Drawings

The sign design and details found throughout / attached to this document are to illustrate general design intent and are for reference purposes only. The Contractor will be responsible for providing detailed shop drawings. The Implementation Team will be responsible for reviewing the shop drawings, coordinating revisions with the Contractor, if necessary, and approving them.

The Contractor should provide detailed shop drawings to accurately reflect the design intent illustrated throughout this document. Once shop drawings have been approved by the Implementation Team, the Contractor will be responsible for having them stamped by a certified structural engineer, before proceeding with work.

Upon shop drawing approval, the Contractor will be responsible for providing physical samples of all materials and finishes they intend to use. The Implementation Team will be responsible for reviewing the materials and finishes, coordinating adjustments with the Contractor, if necessary, and approving them.

Upon installation, the Contractor will be responsible for providing as-built drawings, capturing any adjustments made during the installation process. The Implementation Team will be responsible for maintaining records of these changes, and adjusting future Phases accordingly, if necessary.

#### Workmanship

All workmanship is to be completed with a high degree of precision and fabricated finish. It will be the responsibility of the Contractor to inspect all materials, prior to fabrication, to ensure there are no defects. Any defects found in materials, fabrication, or finishing will be the responsibility of the Contractor to assume. All work is to be inspected prior to transportation to the site, and again upon installation.

The Contractor will also be responsible for the following:

- Adhering to County and OBC as required
- Adhering to MTO regulations, as required
- Ensuring all signage meets the guidelines and standards as defined throughout this document

### Site Suitability

The Contractor will be responsible for ensuring each site is appropriate, prior to installation. The following should be considered when verifying site suitability:

- Sub-utility locates
- Visual obstructions

Adjustments to a sign location by the Contractor will require approval by the Implementation Team.

### Site Requirements

The Contractor is to make every effort to ensure each work site is kept free from debris and unsightly conditions, while ensuring all necessary safety requirements (as per County) are met. All discarded materials are to be removed by the Contractor and disposed of at their own expense. Landscaping and/or hardscaping disturbed during installation is to be repaired to its original condition, by the Contractor, following installation.

### Prototypes

The initial year of sign fabrication and installation (Phase One) should be considered a prototype development period. This is the time to resolve any issues related to sizing, colouring, fabrication methods, etc. It will also provide accurate unit pricing for future sign production. All signage installed within this phase will be considered a “sign prototype”.

The Implementation Team will be responsible for collecting input from County Divisions, and the public, and coordinating with the Contractor to respond accordingly. This could be a series of meetings throughout the year, between the Project Manager and the Contractor, or could be an end-of-year meeting, between the Implementation Team and the Contractor.

Any adjustments to fabrication and/or installation will be made according to the performance of sign prototypes, following a specified period of time (minimum one year). Upon approval by the Implementation Team, the County will need to approve the shop drawings. All shop drawings and as-built drawings will become property of the County.

### Manuals

Upon installation of signage, the Contractor will be responsible for providing a manual of maintenance guidelines, specific to each sign type, to the Implementation Team. It will be the responsibility of the Implementation Team to ensure these manuals are distributed to the appropriate Divisions. It is recommended that these manuals be followed to ensure signage is properly maintained and kept from disrepair.

### Approve

Following installation, the Implementation Team will be responsible for reviewing signage to ensure satisfactory completion. The Team should consider the following:

- Adherence to contractual obligations
- Overall quality (regarding painted finishes, hardware, etc.)
- Condition of the site and surroundings
- Obtain as-built Drawings from the Contractor

If there are any concerns following installation, it will be the responsibility of the Implementation Team to contact the Contractor immediately to determine a resolution.

## 5. Maintain Communications & Record

The Implementation Team will need to maintain excellent communication with the Contractor.

All phases should include an end-of-year meeting, between the Implementation Team and the Contractor. This meeting is to:

- Discuss revisions
- Review cost adjustments
- Discuss and plan for the next phase

### Record Keeping

The Messaging Chart is a working document, that will require continuous updates. Information to be updated will include the following:

- Direction(s)
- Destination(s)
- MsgSymbol
- Confirmed Messaging
- Mounting Type
- Year Installed
- Year Inspected
- Rating
- Field Notes

It will be the responsibility of the Implementation Team to collect this information and coordinate with the appropriate GIS representative from the Haldimand County Planning & Development Division. The Implementation Team should communicate with this representative regularly.

For more information on record keeping, refer to Messaging Chart & Sign Location Mapping (GIS) on page 39.

## 6. Review & Evaluate

Once installation has concluded for the year, a meeting is to occur with the entire Team. This meeting is to:

- Review and evaluate the implementation process.
- Identify what went well.
- Discuss what could be improved upon.
- Identify steps to improve the implementation process.
- Identify any outstanding tasks that were not fulfilled in this phase.
- Coordinate maintenance, as required, with the appropriate County Division(s).
- Record meeting notes and ensure they are considered during the Plan Ahead stage, applicable to the next phase.

### Monitoring Success

The Implementation Team will be responsible for monitoring the success of the Haldimand Signage Strategy. To do so, it is recommended the Team consult with various stakeholders that may have insight on the effectiveness of all signage installed to date. Stakeholders may include:

- Tourism Committees
- Visitor Information Staff
- Representative(s) from Public Works Operations Division
- Representative(s) from Roads Operations Division
- Representative(s) from Innovation & Technology Services Division
- Representative(s) from Economic Development & Tourism Division
- Representative(s) from Facilities, Parks, Cemeteries & Forestry Operations Division
- Representative(s) from Planning & Development Division
- Representative(s) from Community Development & Partnerships
- Representative(s) from Customer Experience & Communication

If an issue arises, or stakeholders identify an opportunity for improvement, it will be the responsibility of the Implementation Team to devise a plan to address it.

### Coordinating Maintenance

The Haldimand Signage System will require ongoing physical maintenance to ensure continued success. Physical maintenance is a responsibility that will be shared between the County and the Contractor. This may extend beyond the scope of the Implementation Team. The Implementation Team will be responsible for coordinating with the appropriate County Divisions to ensure maintenance is occurring, as required.

### County Responsibilities

The County will be responsible for the following:

- Monitoring signage on an annual basis to ensure they are safe, free from visual obstruction, debris, and/or vandalism, and that fasteners and hardware are in good, working order.
- Repairing damage, beyond obligation of the Contractor.
- Recording any deficiencies or opportunities for improvement and coordinating with the Implementation Team and the Contractor with GIS follow up.

### Contractor Responsibilities

The Contractor will be responsible for the following:

- Maintaining signage as per specifications outline in the contract.
- Correcting any deficiencies and providing repair and/or replacement as per warranty, as required.
- Recording any deficiencies or opportunities for improvement and coordinating with the Implementation Team and the Contractor.

### Moving Forward

The stages of implementation form a cycle, that will need to be repeated for each phase, until the Haldimand Signage System is complete. To continue implementation, the Implementation Team should return to the Plan Ahead stage.

## Appendix

## Appendix A: 2022 Haldimand County Destination List

Using the inclusion criteria and ranking classifications provided earlier in this report, the Project Management Team (refer to Opening Remarks) compiled the 2022 Haldimand County Destination List.

Further consolidation by the Project Management Team (refer to Opening Remarks) lead to the establishment of the HCCSS Destination List (refer to HCCSS Destination List on page 12). All HCCSS work and planning has been based upon the HCCSS Destination List.

### Legend

- ☐ Location to Sign  
[Amenity at Above Location]

### Level 1

#### Downtowns

- ☐ Caledonia
- ☐ Cayuga
- ☐ Dunnville
- ☐ Hagersville
- ☐ Jarvis
- ☐ Selkirk

#### Government Buildings

- ☐ Cayuga Courthouse  
[Haldimand Plaque]
- ☐ Haldimand County Administrative Building

#### Tourist Information Centres

- ☐ Caledonia

### Level 2

#### Attractions

- ☐ Port Maitland Lighthouse & Pier

#### Beach Access (Public)

- ☐ Port Maitland

#### Major Community Halls/ Arena

- ☐ Caledonia Lions Community Centre/ Haldimand County Caledonia Centre  
[Caledonia Library]

- ☐ Cayuga Memorial Arena
- ☐ Dunnville Community Lifespan Centre/ Arena
- ☐ Hagersville Arena
- ☐ Fisherville Lions Community Centre, Park and Multi-Purpose Outdoor Facility
- ☐ Jarvis Lions Community Centre and Jarvis Lions Park

#### Government Buildings and Institutions

- ☐ Grandview Lodge

#### Major Heritage Sites and Museums

- ☐ Cayuga Library and Heritage Centre
- ☐ Edinburgh Square Heritage and Cultural Centre  
[Cenotaph in Edinburgh Square]
- ☐ Wilson MacDonald Memorial School Museum

#### Major Parks

- ☐ Caledonia Kinsmen Park
- ☐ Dunnville Waterfront Park and Garfield Disher Memorial Park
- ☐ LaFortune Park  
[Kayak Launch]
- ☐ Thompson Creek Park and Eco-Centre

#### Trails and Hiking Locations

##### Caledonia

- ☐ Burke Park Trail
- ☐ Chippewa Trail  
[Chippewa Cycling Trailhead]
- ☐ Gypsum Mine Tract Trail
- ☐ Rotary Riverside Trail

##### Cayuga

- ☐ Cayuga Grand Vista

##### Dunnville/Lowbanks

- ☐ Blue Heron Way Trail
- ☐ Dunnville Centennial Park to the Dunnville Farmers Market

##### Selkirk

- ☐ Waterfront Way Trail and Parkette

## Townsend

- ☐ Townsend Recreation Trail

## Level 3

### Boat Access

- ☐ Bob Baigent Park
- ☐ Port Maitland Esplanade and Pier
- ☐ Port Maitland East/Stromness
- ☐ Wingfield Park (Dunnville)
- ☐ Waterfront Park Boat Launch

### Community Halls

- ☐ Canboro Community Centre
- ☐ Canfield Community Centre  
[Black Settlers heritage Marker]
- ☐ Cayuga Kinsmen Community Centre
- ☐ Cayuga Seniors Drop-In Centre
- ☐ Cheapside Community Hall
- ☐ Haldimand Agricultural Community Centre
- ☐ Lowbanks Community Centre
- ☐ Nanticoke Community Hall
- ☐ Rainham Centre Community Hall
- ☐ Selkirk Centennial Community Centre and Library
- ☐ Seneca Centennial Hall
- ☐ Townsend Lions Hall

### Community Parks / Cycling Trailheads

#### Cayuga and Area

- ☐ Broechler Soccer Park
- ☐ Canfield Park
- ☐ Cayuga Kinsmen Park  
[Blue Route (River Route)]

#### Caledonia and Area

- ☐ Henning Park
- ☐ McKinnon Park  
[Green Route (Haldimand Tour)]
- ☐ McClung Soccer Park
- ☐ Seneca Park (Caledonia)

- ☐ York Park

#### Dunnville / Port Maitland

- ☐ Dunnville Centennial Park  
[Muddy Statue]
- ☐ Dunnville Central Park & Bandshell  
[War Memorial in Central Park]
- ☐ Dunnville Kinsmen Park  
[Yellow Route (Lowbanks Loop Trailhead)]
- ☐ Dunnville Lions Park
- ☐ Dunnville Soccer Park
- ☐ Ramsey Drive Park
- ☐ Port Maitland Esplanade Park
- ☐ Port Maitland East Park  
[Port Maitland Cairn]

#### Fisherville

- ☐ Fisherville Lions Park

#### Hagersville

- ☐ Sgt. Andrew Harnett Memorial Park (Hagersville)  
[Haldimand Memorial Arboretum]
- ☐ Grant Kett Park  
[Pink Route (Hagersville Area Tour)]

#### Selkirk

- ☐ Selkirk Community Park  
[Orange Route (Lakeview Tour)]  
[Selkirk Memorial Gates]

#### Townsend

- ☐ Townsend Lions Park

#### Farmers Markets

- ☐ Caledonia Farmers Market
- ☐ Dunnville Farmers Market
- ☐ Hagersville Farmers Market

#### Heritage Sites

- ☐ Port Maitland Lock

#### Libraries and Community Hubs

- ☐ Dunnville Public Library  
[Harvard Memorial]
- ☐ Hagersville Library
- ☐ Jarvis Public Library  
[Jarvus Walpole War Memorial]

\*Please note tourism information centres are located within all Haldimand County libraries.

### Level 3 (Locations for Future Signage Consideration)

#### Cemeteries

- ☐ Briggs
- ☐ Caledonia
- ☐ Canborough
- ☐ Canfield United
- ☐ Cayuga Riverside
- ☐ Decewsville
- ☐ Diltz Road/Bethany United Church
- ☐ Dunnville Riverside
- ☐ Ebenezer Methodist United Church
- ☐ Hagersville
- ☐ Highbanks/Sherbrooke Baptist
- ☐ Inman Road
- ☐ Kirk
- ☐ Lowbanks
- ☐ Melick
- ☐ Moote Rd
- ☐ Mount Carmel
- ☐ Port Maitland Christ Church Anglican
- ☐ Woodlawn

### Level 4

#### Neighbourhood Parks

- ☐ Avalon Park
- ☐ Black Creek Park
- ☐ Canborough Park
- ☐ Canfield Park
- ☐ Decewsville Park

- ☐ Dunnville Gardiner Park
- ☐ Dunnville Rail Park
- ☐ Dunrobin Park
- ☐ Elmvale Park
- ☐ Hagersville Park
- ☐ Haller Park
- ☐ Highland Heights Park
- ☐ Lower Kinsmen Park
- ☐ Nanticoke Community Park
- ☐ Port Maitland East Park
- ☐ Ravine Park
- ☐ Springvale Park
- ☐ Thistlemoor Park
- ☐ Twin Heights Park
- ☐ Village Green Park
- ☐ Williamson Woods Park

#### Walking and Hiking Pathways

- ☐ Ron Clark Memorial Walkway
- ☐ Jarvis Lions Park Pathway
- ☐ Patterson River Walkway
- ☐ The Ramsey Walkway

## Appendix B: Sign Programs (Pre HCCSS)

The following sign programs were in place prior to the development of the Haldimand County Comprehensive Signage Strategy. They are grouped in terms of similar uses. It is understood that many of these signs ‘programs’ may involve multiple sign ‘types’, and are proposed for integration with the new HCCSS.

### Trails, Routes, and Parkway Signage

- Cycling Routes and Cycling Amenity Signage
- Trails and Trailhead Signage
- Veterans Memorial Parkway Signage

### Place Identification Signage

- Facility Signage
- Cemetery, Park and Playing Field Signage

### Wayfinding Signage

- Farmers Markets and Urban Wayfinding
- Information Signs

### Pay to Play Program

- Agriculture and Tourism Directional Signage

### Support Signs

- Tourist Information Centre Signage
- Grand River Marker Indicator signage
- Community Group Signage
- Heritage Signage

### Gateway/Entrance Signs

### Others

- Grand River Scenic Parkway Signage (requested for removal)
- Grand River Marker Signs (another jurisdiction)
- Waterfront Trail Wayfinding Signage (another jurisdiction)

## Appendix C: Wayfinding Signage Inventory

The following information was taken from the current Haldimand County Sign Inventory found on the Haldimand County GIS mapping database. Priority for removal is recommended as high, medium, or low, with rationale included. An estimated replacement cost has been included, as necessary.

### General

Qty	Sign type	H	M	L	Est. Unit Cost	Sub-Total	Notes:
8	Veteran Signage			x	\$350	\$2,800	Replace damaged signs as needed. Remove old logo if separate sign. Possible sponsor opportunity for replacement with new sign.
64	Urban Wayfinding	x	x		nr		Existing Urban Wayfinding signs should be removed as new directional signs with are installed in each town or settlement area. New sign budgets can be found in the Section 1.5 - Budgets.
18	Tourism + Agricultural Directional Signage	x			TBD		New 'Pay to Play' signs will instill new life into the revised program.
5	Farmer's Market			x	nr		To be replaced as new Vehicular Directional Signs are installed in each community.
1	Historical Plaque	x					Remove existing - poor condition. No replacement required.
3	Fishing Poster Board - Interpretive Panel						Federally funded interpretive panel. Replacement not recommended.
9	Tourist Information - Question Signs						Signs in good condition and not required for removal. Replace damaged signs as needed. Otherwise, remove as new wayfinding signs with Tourist Information are installed.
31	Grand River Parkway			x	\$350	\$10,850	Consider relevancy of the 'Parkway'. Replace damaged signs with new sign, or as funds become available.
14	County Entrance Signage	x			\$4,500	\$63,000	County Entrance Signs should be considered a priority as they introduce new branding.
1	Caledonia Kinsmen Park - Park Entrance	x			\$2,500	\$2,500	Popular parks with many amenities and activities. Good site to showcase new signs.

## Cycling and Trail Signage

Qty	Sign type	H	M	L	Est. Unit Cost	Sub-Total	Notes:
50	Cycling Share the Road - Old			x	\$350		Share the road signs are generic and not requiring removal / replacement unless damaged.
4	Cycling Share the Road - New						No need to replace unless damaged.
1	Cycling and Chippewa Trail		x		\$350	\$350	Cycling trail sign replacement: Existing signs have the old County logo and should be replaced with new signs. Each trail should have all of its signs replaced during the same phase to maintain consistency. Phases can happen as funding becomes available. Existing sign installations have been supported by various service groups and/or community organizations through the Community Partnership Program.
1	Cycling Blue/Green Route		x		\$350	\$350	
11	Cycling Green Route		x		\$350	\$3,850	
13	Cycling Blue Route		x		\$350	\$4,550	
8	Cycling Pink Route		x		\$350	\$2,800	
13	Cycling Orange Route		x		\$350	\$4,550	
7	Cycling Amenity		x		\$350	\$2,450	
1	Rotary Riverside Trail		x		\$350	\$350	
19	Waterfront Trail		x		\$350	\$6,650	

*End of Report*
