

## THE CORPORATION OF HALDIMAND COUNTY

By-law Number /23

### **Being a by-law to provide for variation of assessment for maintenance and repair of drainage works in Haldimand County within the Harrop Municipal Drain**

**WHEREAS** Section 76 of the *Drainage Act*, R.S.O. 1990, c. D17, as amended, provides for the variation of assessment for maintenance and repair of a drainage works described in the said Act;

**WHEREAS** the Council of the Corporation of Haldimand County has procured a report prepared by GM BluePlan Engineering Ltd. of Hamilton, Ontario;

**WHEREAS** the estimated total cost of the drainage works is \$90,000.00;

**WHEREAS** \$32,612.76 of the amount to be contributed by the Corporation of Haldimand County;

**WHEREAS** \$55,786.68 is being assessed to the landowners within the drainage area of Haldimand County for the drainage works;

**WHEREAS** \$1,600.56 is being assessed to the Province of Ontario (MTO) within the drainage area for the drainage works;

**AND WHEREAS** Haldimand County Council is of the opinion that the drainage of the area is desirable,

**NOW THEREFORE, the Council of The Corporation of Haldimand County enacts as follows:**

1. **THAT** the Engineer's Report dated August 16, 2023, attached to and forming part of this by-law, is hereby adopted, and the drainage works as indicated in the report are hereby authorized and shall be completed in accordance with the report.
2. **THAT** a special annual rate sufficient to recover the costs of the drainage work and associated interest costs shall be levied upon the lands and roads as set forth in Schedules A and B in the attached Engineer's Report, to be collected in the same manner and at the same time as other taxes are collected in each year for five (5) years after the passing of a by-law to levy the final costs.
3. **THAT** implementation of the recommendations contained in the Engineer's Report be carried out under the scheduled maintenance and repair of the Harrop Municipal Drain.

4. **AND THAT** this by-law shall come into force and effect upon the third and final reading and may be cited as the "Harrop Municipal Drain By-Law, 2023".

READ a first and second time this 18<sup>th</sup> day of December, 2023.

READ a third and finally passed this \_\_\_\_ day of Month, Year.

**Re: Harrop Municipal Drain**

Dear Mayor Bentley and Members of Council:

We are pleased to present our Report on the “Harrop Municipal Drain” in response to the Haldimand County Council Report, ENG 13-2019.

Authority to prepare this Report was obtained by a resolution of Haldimand County Council at its September 17, 2019 meeting to appoint the undersigned Professional Engineer of GM BluePlan Engineering Limited (GMBP) to prepare an Engineer’s Report under Section 76.

In accordance with your instructions pursuant to a request received by Council under Section 76 of the Drainage Act, R.S.O. 1990, for adjustments to the schedule of assessment for maintenance and repair for the Harrop Municipal Drain, GMBP has prepared for Council’s consideration the following Drainage Report and Maintenance Schedules.

We trust that the information contained within will be satisfactory. If there are any questions or concerns, please do not hesitate to contact us.

Yours truly,

GM BLUEPLAN ENGINEERING LIMITED

Per:

A handwritten signature in blue ink that reads "Danielle Anders".

Danielle Anders, M.A.Sc., P.Eng.

## 1. INTRODUCTION

The Council of Haldimand County (County) appointed GM BluePlan Engineering Ltd. (GMBP) to complete a new assessment schedule for maintenance and repair for the Harrop Municipal Drain (Harrop Drain) under Section 76 of the *Drainage Act*, R.S.O. 1990, c. D.17 in accordance with report ENG 13-2019, dated September 17, 2019. The County initiated this appointment to comply with the Drainage Referee's order, dated November 5, 2018, as part of their decision on a landowner appeal based on assessments from 2015 maintenance work.

A Section 76 report is used to update a drain's Assessment Schedule for Maintenance and Repair by identifying the landowners and land usages in a drainage watershed, and is typically prepared when the existing Assessment Schedule becomes out of date due to land severances, farm consolidations, land use changes, connections or disconnections from the drain, etc. It does not authorize the execution of any work but provides an equitable means to distribute future maintenance and repair costs.

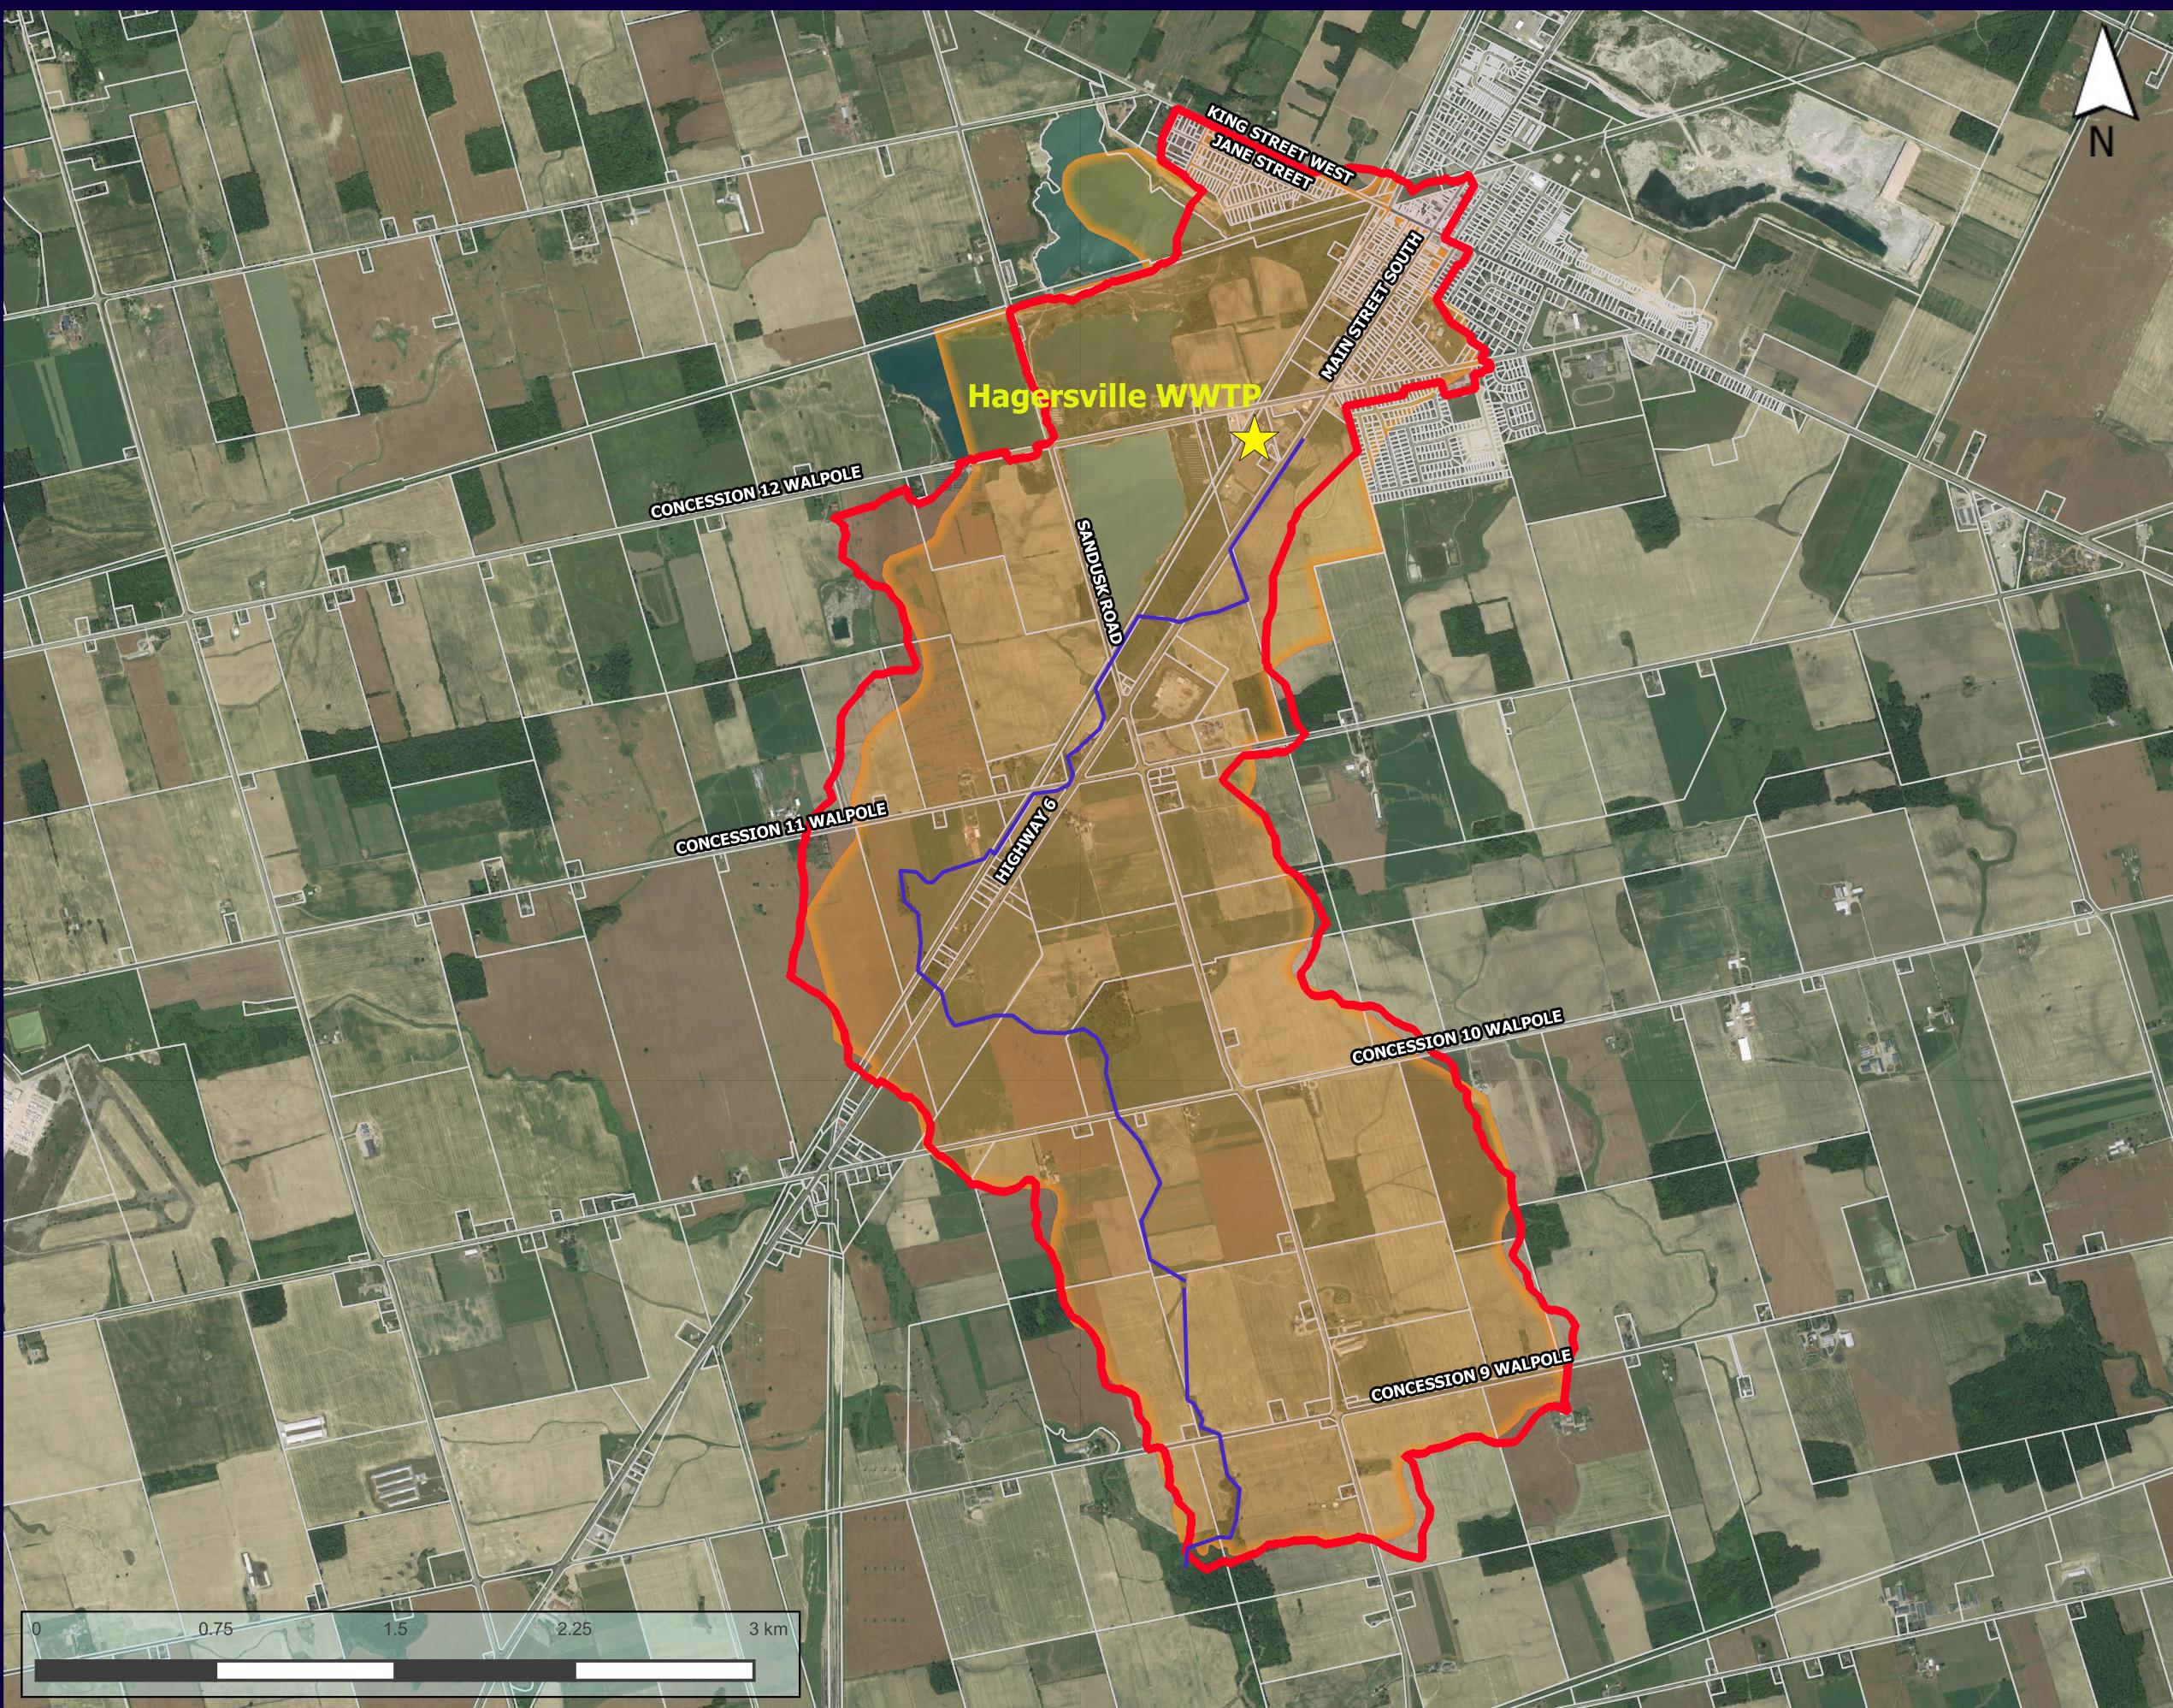

**Figure 1-1** illustrates Harrop Drain, a nearly 7 km long open drain, and its watershed area which outlets to a branch of Sandusk Creek, just south of Lot 11, Concession 9 in the former Township of Walpole. This report will supplement the Harrop Drain Engineer's Report, dated December 5, 1957, prepared by R. Blake Erwin, P.Eng., O.L.S, Drainage Engineer for the Township of Walpole (now Haldimand County).

Harrop Drain Engineers Report  
Assessment Schedule

Harrop Drain and Surrounding Parcels

## 2. DRAINAGE HISTORY

The Harrop Drain was established through an Engineer's Report dated December 5, 1957, prepared by R. Blake Erwin, P.Eng., O.L.S, Drainage Engineer for the Township of Walpole, in response to a Petition with 14 signatures received by the Township of Walpole Council in 1952. The 1957 Engineer's Report included the Harrop Drain plan and profile, a land plan, Schedule of Assessment, Harrop Drain specifications, and highway culvert plan. Construction of the Harrop Drain was completed in 1959 for a total of \$15,278.

Prior to the Township's adoption of the Engineer's Report in 1957, sections of the new Harrop Drain were part of an Award Drain (**Figure 2-1**) established by the award of James Williamson, Engineer, December 1894 (Lot 11, 12, Concession 11; Lot 12 to 14, Concession 12) and Roger Lee, June 1928 (for Fred Richardson, Lot 13 Concession 12). An Award Drain was built under the authority of the Ditches and Watercourses Act (repealed in 1963) where a person "requisitioned" the municipality for a solution to a drainage issue and an engineer appointed by municipal council would investigate. If the engineer found that a ditch or pipe was required, a report was written defining the solution and responsibility for construction and maintenance of the drain was "awarded" to each property owner directly involved.

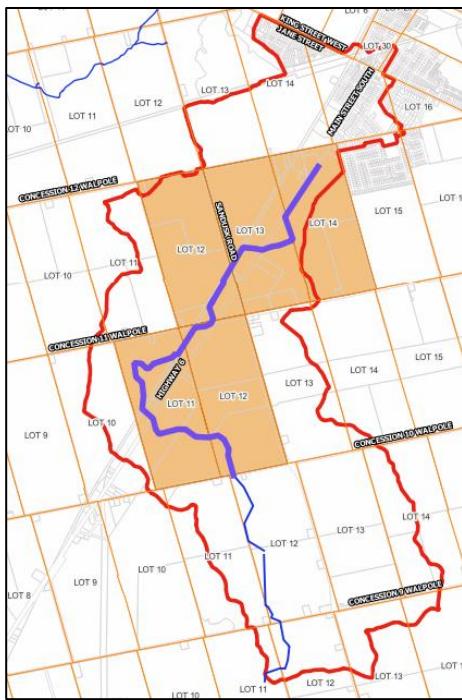

The County provided hard-copy files which contain historical correspondence, background information, and documentation regarding the Harrop Drain. The oldest documentation is a letter from 1928 (Lee and Nash, Civil Engineers & Surveyors) to the Village of Hagersville which suggested constructing stormwater drainage south on Main Street to outlet to the creek south of Mud Street (now Parkview Road) with plan and profile drawings for a complete drainage system to alleviate flooding issues in the main portion of the village (drawings not attached to letter). Whether this plan was adopted at the time is not known, but storm sewers currently service a portion of the downtown via Main Street South to Harrop Drain.

In 1948, the Hagersville Wastewater Treatment Plant (WWTP) was built and began discharging to the open ditch (Award Drain), providing more continuous flow. According to anecdotes, prior to this, parts of the ditch would often dry up during the summer.

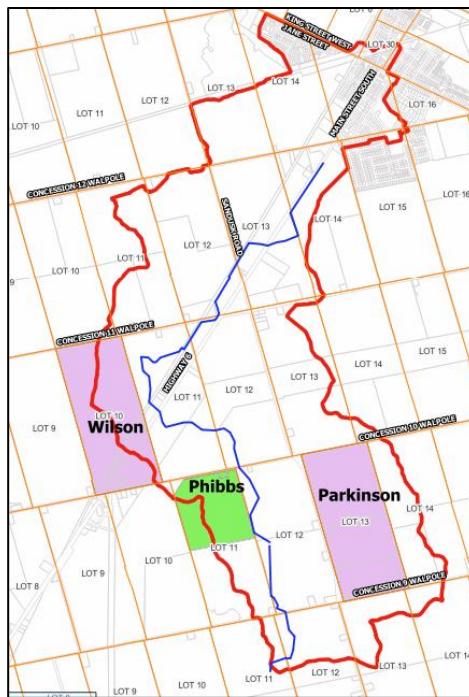

After adoption of the 1957 Engineer's Report, some residents were opposed to the Harrop Drain when they found out they would be assessed costs for its maintenance. Several area landowners appealed their assessments to a County Court Judge and two won their appeals case, Ivan Parkinson (Lot 13, Concession 10, see **Figure 2-2**) and Harold Wilson (Lot 10, Concession 11, **Figure 2-2**), claiming they had no drainage issues and did not benefit from the Drain improvements. Another landowner, Rex Phibbs, had his assessment (benefit liability) reduced slightly.

It should be noted that the Drainage Referee's order, dated November 5, 2018, stated that the 1957 assessment schedule from the Engineer's Report, as amended on appeal, is out of touch with existing conditions and current assessment practices, and that Judges who now have authority on assessments would assess these landowners for outlet liability because their lands contribute water to, and therefore use, the Harrop Drain.

The Harrop Drain was originally within the Township of Walpole (Township). In 1974, part of the Township was amalgamated with various other municipalities to become the Town of Haldimand, with the rest of the Township incorporated within the new City of Nanticoke. In 2001, the City of Nanticoke was dissolved and split between Haldimand County and Norfolk County and the Harrop Drain is now under the jurisdiction of Haldimand County.

**Figure 2-1: Award Drain 1894 & 1928**

**Figure 2-2: 1958 Appeal**

## 2.1. Updates to Assessment Schedule

In 1992, approximately 1.09 km of the Harrop Drain was cleaned (part of Lot 12 and entirely through Lot 13, Concession 12, as requested by the Ministry of Transportation) and the design grade and side-slopes restored, three – 750mm concrete pipes were removed, cleaned, and re-installed, and a culvert was replaced with a 1200mm diameter x 20m long section at Regional Road 18 (Sandusk Road). At this time, it was apparent that many properties had changed since the 1957 report and updates to the assessment schedule would be required to assess the maintenance cost of \$12,700.

In 1996, the City of Nanticoke (City) initiated a review of the Harrop Drain and updates to the assessment schedule and plan were completed under Section 65, authorized by the City's By-law 47-98. In June 1998, the City sent out notice to all Harrop Drain properties that they would be assessed for the maintenance work done in 1992 and many complaints were received from landowners, some of whom were unaware they were served by a Municipal Drain. As the maintenance work was completed on the drain more than five years previous, the City decided to write off the cost of the maintenance work, instead of assessing the maintenance work costs to all properties.

## 2.2. Recent Drain Maintenance

Maintenance on the Harrop Drain was last completed in early 2015, with a portion completed in 2016 due to approval delay. This work was assessed under By-law 1879/17 which prompted appeals to the Drainage Referee from Teresa Beischlag (property formerly owned by Ivan Parkinson) and James Douglas Wilson (son of former property owner Harold Wilson) in 2017. These two properties had appealed their assessments in 1958 and won these appeals, and thus the current owners argued they should not have been included in the 1996 assessment schedule updates. Additionally, the property owned by David Phibbs (son of former

property owner Rex Phibbs) had a partial reduction in assessment due to a 1958 amendment that had not been accounted for in the 1996 assessment schedule update. The Ontario Superior Court of Justice in the Court of the Drainage Referee adjusted the assessments for these three properties in a ruling dated November 5, 2018 and ordered the County to complete an updated assessment schedule for the Harrop Drain under Section 76.

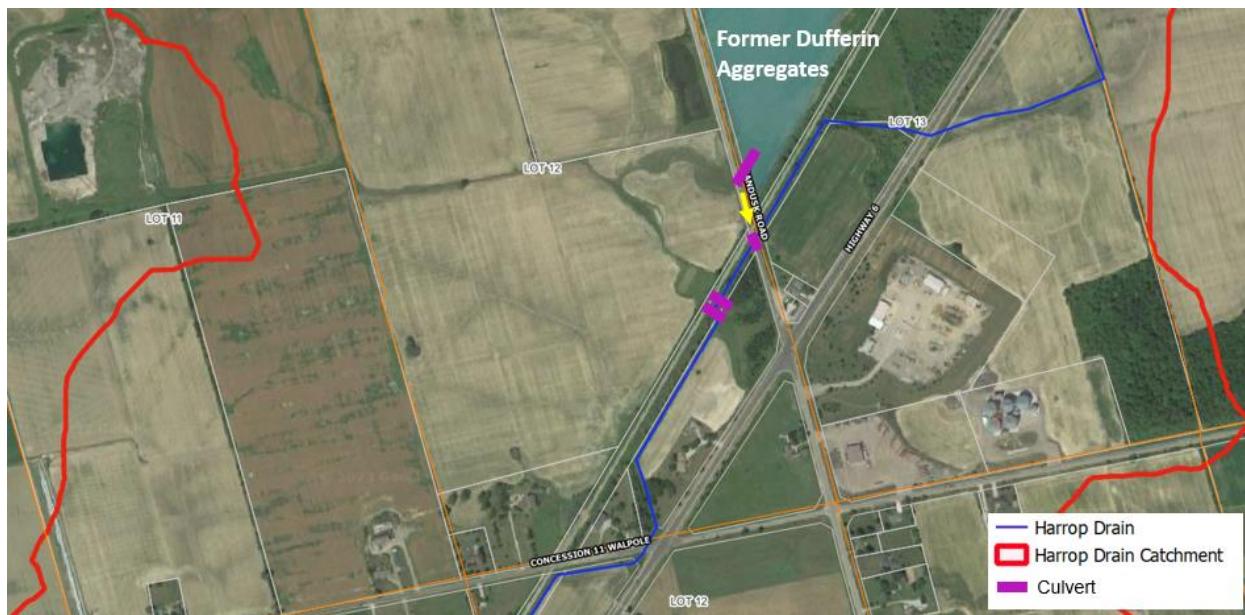

### 3. WATERSHED

According to the 1957 Engineer's Report, the Harrop Drain received flows from the following sources:

1. Surface run-off from farmlands and roads
2. Surface run-off from streets and lots in part of the Village of Hagersville
3. Treated effluent from a sewage disposal unit operated by the Village of Hagersville
4. Electrically operated centrifugal pumps used to de-water stone quarries operated by Hagersville Quarries Ltd.
5. Electrically operated centrifugal pump used to de-water a stone quarry operated by Canada Crushed Stone Company.

Since the 1957 Engineer's Report, the following changes have occurred in the Harrop Drain watershed:

- The quarries are no longer in operation and do not actively discharge to the Drain (quarry licences surrendered in 2005 and 2007). The former quarries are now man-made lakes and only one (former Dufferin Aggregates, see **Figure 3-1**) is directly connected to the Drain via a culvert at Sandusk Rd which discharges by gravity depending on water elevation.

**Figure 3-1: Former Quarry Overflows to Drain**

- At least one of the other quarry sites will potentially be developed in the future for residential housing. An application has been submitted to rezone the former quarry site (at Sandusk Rd/Concession 12) for residential from its current zoning of general and extractive industrial. This site is not developed and has been recently used for agriculture. This rezoning proposal has not been approved, nor is there an approved development plan, thus the stormwater management plan for the site is not clear.

However, County staff advise that it is very likely this area will be rezoned residential within the next decade and should be assessed as such to avoid the necessity for a future adjustment.

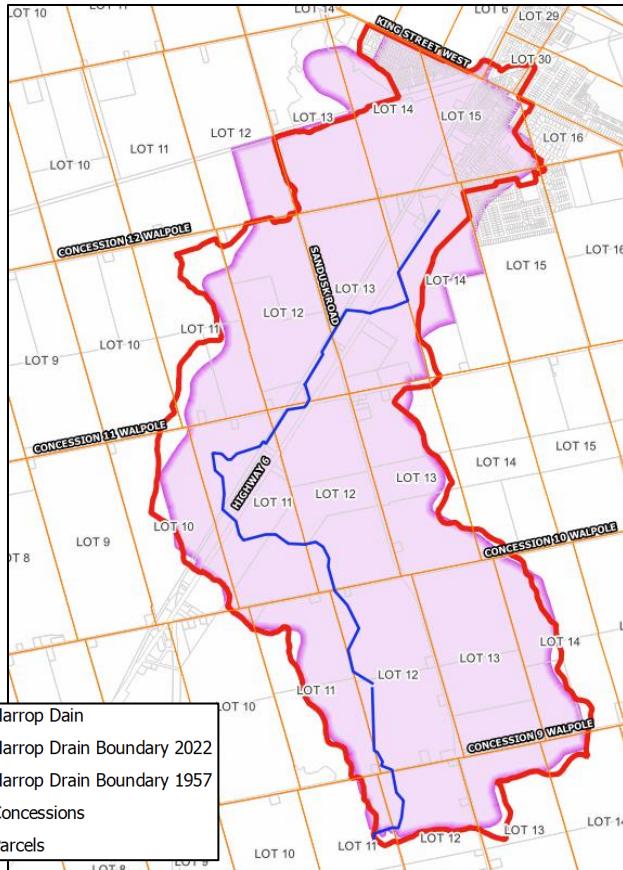

- The Hagersville WWTP, owned by Haldimand County and operated by Veolia Water, has two parallel extended aeration plants which discharge treated effluent (tertiary filtration and UV disinfection) into the Harrop Drain. The WWTP has a nominal design flow of 4,200 m<sup>3</sup>/d (as per 2018 Hagersville WWTP Annual Report) and is equipped with an equalization tank to help mitigate high flow events.

To verify the current Harrop Drain watershed boundary, a digital elevation model (DEM, from LiDAR data collected by the Ministry of Natural Resources and Forestry) was used to determine the direction of surface runoff. If the watershed boundary was not clear from the DEM, elevation surveys of the areas were completed during a GMBP site investigation in January 2020. The site investigation also verified locations of storm sewer segments, catch basins, storm outfalls, culverts, and manholes, along with the direction of flows. Through this process, minor adjustments to the watershed boundary were made to account for the current land use and topography which results in some properties having more, or less, area within the boundary compared to the 1957 Engineer's Report.

Based on this process, the watershed has an estimated area of 1,025 ha. **Figure 3-2** illustrates an overlay of the current watershed boundary with the one from the 1957 Engineer's Report. The watershed is currently comprised of the following land uses as summarized in **Table 3-1**.

**Table 3-1: Harrop Drain Watershed Land Use**

Land Use	Area (ha)	Percentage
<b>Vacant Land</b>	16.6	1.6%
<b>Agricultural</b>	785.4	76.6%
<b>Residential</b>	57.4	5.6%
<b>Commercial</b>	8.3	0.8%
<b>Industrial</b>	96.3	9.4%
<b>Institutional</b>	3.2	0.3%
<b>Recreational</b>	3.2	0.3%
<b>Government</b>	1.8	0.2%
<b>Roads</b>	53.3	5.2%
<b>Total</b>	1025.4	100.0%

**Figure 3-2: Watershed Boundary Comparison – 1957 to 2022**

## 4. NEW ASSESSMENT SCHEDULES

Section 76 of the Drainage Act allows for a report to be prepared by an Engineer on behalf of a municipality to address changes to the schedule of assessment for maintenance and repair works for a municipal drain. Such a report may be warranted if a municipal drain is constructed by by-law under the Drainage Act, and circumstances arise that require adjustment to the originally set maintenance schedules. Section 76 of The Drainage Act states as follows:

*"The council of any local municipality liable for contribution to a drainage works in connection with which conditions have changed or circumstances have arisen such as to justify a variation of the assessment for maintenance and repair of the drainage works may make an application to the Tribunal, of which notice has been given to the head of every other municipality affected by the drainage works, for permission to procure a report of an engineer to vary the assessment, and, in the event of such permission being given, such council may appoint an engineer for such purpose and may adopt the report but, if all the lands and roads assessed or intended to be assessed lie within the limits of one local municipality, the council of that municipality may procure and adopt such report without such permission. R.S.O. 1990"*

This Section 76 report is being prepared to comply with the Drainage Referee's order dated November 5, 2018 which stated:

*"The County is to procure, in accordance with Section 76 of the Drainage Act, the report of an engineer to vary the assessment schedule for the maintenance and repair of the Harrop Drain having regard for changes in conditions and circumstances since the most recent report on the Drain prepared by R. Blake Erwin, P.Eng., O.L.S. dated December 5, 1957."*

## 4.1. Assessment for Benefit

Section 21 of the Drainage Act states the following:

*"The engineer in the report shall assess for benefit, outlet liability and injuring liability, and shall insert in an assessment schedule, in separate columns, the sums assessed for each opposite each parcel of land and road liable therefor. R.S.O. 1990, c. D.17, s. 21."*

It is useful to define the terms mentioned as they are described in the Act:

*"Benefit" means the advantages to any lands, roads, buildings or other structures from the construction, improvement, repair or maintenance of a drainage works such as will result in a higher market value or increased crop production or improved appearance or better control of surface or subsurface water, or any other advantages relating to the betterment of lands, roads, buildings or other structures;*

*"Outlet Liability" means the part of the cost of the construction, improvement or maintenance of a drainage works that is required to provide such outlet or improved outlet; and*

*"Injuring Liability" means the part of the cost of the construction, improvement, maintenance or repair of a drainage works required to relieve the owners of any land or road from liability for injury caused by water artificially made to flow from such land or road upon any other land or road.*

While not all properties on a drain may receive benefit, all properties within the watershed boundary which contribute flow to, and therefore use, a drain are assessed for outlet liability.

## 5. METHODOLOGY

A Schedule of Assessment is used to share the cost of future maintenance and repair work against all lands within the watershed. In determining the schedule for future maintenance and repair work, properties have been assessed based on their outlet liability. That is, the proportion of assessment for future maintenance and repair work is based on the proportion of runoff an individual property is estimated to contribute to the drain.

This proportion is determined by considering its land use, using agricultural land as a baseline, where land use types are assigned an equivalent area factor (factor) to account for surface permeability. In this manner, agricultural land has a baseline factor of 1.0. Surfaces with low permeability (i.e., paved areas) which cause runoff to flow over the ground and increase the volume of water entering the Harrop Drain have a factor greater than 1.0. Surfaces with high permeability which absorb runoff, such as a wetland, have a factor less than 1.0 as they reduce the volume of runoff flowing to the Harrop Drain.

**Table 5-1** summarizes the equivalent area factors typically assigned to each land use type. Each parcel is classified with a property code through MPAC (Municipal Property Assessment Corporation) which correspond to various land use types, thus a factor is applied to each parcel in the watershed to determine its equivalent area and its percentage of the equivalent total area. Aerial photography of each parcel (using Google maps) was used to confirm land use versus the MPAC codes.

**Table 5-1: Equivalent Area Factors**

Current Land Use	Equivalent Area Factor
<b>Wetland</b>	0.2
<b>Bush</b>	0.5
<b>Agricultural</b>	1.0
<b>Park</b>	1.0
<b>Recreational</b>	1.2
<b>Residential</b>	1.5
<b>Railway</b>	1.3
<b>Commercial</b>	3.0
<b>Institutional</b>	3.0
<b>Industrial</b>	3.0
<b>Paved Road</b>	2.5
<b>Gravel Road</b>	2.5

## 5.1. Hagersville WWTP Assessment

The Hagersville WWTP (Roll No. 159007187100000) requires special consideration for its assessment since it contributes treated sanitary effluent to the Harrop Drain as well as storm runoff. While the WWTP land area would typically be assessed with a factor of 3 in consideration of its industrial land use storm runoff, instead it was assessed a factor of 351.4 to account for its contribution of treated effluent to the Drain as follows:

- The WWTP has a nominal design flow of 4,200 m<sup>3</sup>/d, which is equivalent to 0.0486 m<sup>3</sup>/s or 48.6 L/s. For reference, based on daily WWTP treated effluent flow data from 2016 to 2020, the average flow was 2,872 m<sup>3</sup>/d, which is equivalent to 0.0332 m<sup>3</sup>/s or 33.2 L/s.
- The nominal design flow is considered a representative value to determine the equivalent area factor since treated effluent flows are predicted to increase steadily due to projected housing and population growth.
- The WWTP occupies a land parcel of 1.37 ha and therefore generates 35.5 L/s/ha from the treated effluent flow (48.6 L/s / 1.37 ha).
- The average total annual precipitation for Hagersville is 956.2 mm (Environment Canada, 1981 – 2010, Canadian Climate Normals). Assuming approximately one-third of precipitation will become runoff while the remainder infiltrates to soil or is lost to evapotranspiration, over a typical year a one-hectare property would generate an average of 0.101 L/s/ha. The calculation for this is shown below.

Precipitation that becomes runoff: 956.2 mm x 33% = 318.4 mm

Runoff generated from a one-hectare parcel of land:

$$\begin{aligned}
 318.4 \text{ mm} \times 10,000 \text{ m}^2/\text{ha} &= 3,184 \text{ m}^3/\text{year/ha} \\
 &= 8.7 \text{ m}^3/\text{day/ha} \\
 &= 0.000101 \text{ m}^3/\text{s/ha} \\
 &= 0.101 \text{ L/s/ha}
 \end{aligned}$$

- Therefore, the equivalent area factor for the WWTP is 351.4 (35.5 L/s/ha / 0.101 L/s/ha).

This factor applied to the WWTP results in the plant being assessed for 29.2% of the total outlet liability. The final Schedule of Assessment for Future Maintenance is provided in **Appendix A**.

## 6. PUBLIC INFORMATION CENTRES

Public Information Centres (PICs) have been held to provide residents/owners with opportunities to learn about this project and address any questions or concerns with the process. The first PIC was held October 12, 2019, where 36 people signed in and provided contact information. The main concerns at that time were questions about the cost of the project, the process, and complaints about the way maintenance was performed in 2015.

The second PIC was on March 22, 2023, with 23 visitors. Efforts were made to address questions posed at PIC1 within the PIC2 boards, such as where storm runoff is discharged, the rationale for assessment values, and changes to the County's maintenance procedures. Some residents believed the assessment factor for the WWTP treated effluent was too low because the plant discharges constantly versus storm runoff which only occurs with precipitation. The counter argument to this point is that during dry weather, the discharge from the WWTP comprises a tiny fraction of the Drain capacity, thus has minimal impact on Drain erosion or maintenance issues. This discussion led to the calculation shown in Section 5.1 which attempts to compare plant discharges to typical rainfall on an agricultural property.

Concerns were raised about residents being "double-charged" as they pay their assessment as well as pay taxes which cover the County's WWTP assessment portion. While taxes pay for a great variety of services for general community benefit, the County acknowledged that it may be more equitable for the effluent assessment portion of costs to be charged to WWTP operating costs which are funded only by those who are connected to the WWTP through sanitary sewers, thus excluding those on septic systems. This option would need to be addressed by County Council.

## 7. RECOMMENDATIONS

The updated Schedule of Assessment for Maintenance and Repair for the lands and roads serviced by the Harrop Drain is provided in **Appendix A**. After adoption of this report, the Harrop Drain shall be maintained by the County, with future maintenance and repair costs distributed pro rata to all upstream lands and roads in accordance with the Schedule of Assessment. This updated Schedule of Assessment is not applicable until this report has been adopted under a County by-law.

Future costs for maintenance of, or due to the existence of, a road crossing is to be fully assessed to the Road Authority having jurisdiction over the road. The Road Authority has the right under Section 69 (1) to undertake any maintenance or repair to their culverts as they deem necessary. The Drainage Superintendent should be advised of any works being undertaken.

Future costs for maintenance of, or due the existence of, a railway is to be fully assessed to the Railway Company having jurisdiction over the railway. The Railway Company has the right under Section 69 (1) to undertake any maintenance or repair to their culverts as they deem necessary, and to maintain and repair the drain upon, along, adjoining, under or across the utility infrastructure. The Drainage Superintendent should be advised of any works being undertaken.

Future costs for maintenance due to the existence of utility infrastructure shall be fully assessed to the utility company which owns the utility infrastructure. The utility company has the right under Section 69(1) to maintain or repair the drain upon, along, adjoining, under or across the utility infrastructure. The Drainage Superintendent should be advised of any works being undertaken.

Future costs for the maintenance and repair for the first access crossing on a property shall be assessed as follows:

- Abutting Property: 50%
- Upstream Lands: 50% (assessed pro rata in accordance with Schedule of Assessment in **Appendix A**)

Future costs for a secondary or additional crossing on a property for a drain shall be fully assessed to the landowner.

Private culverts that are not considered part of the Harrop Drain are the sole responsibility of the landowner. Any work to maintain, improve or replace private culverts shall be fully at the landowners' expense.

GMBP recommends that this Schedule of Assessment for Maintenance and Repair be continually updated as future severances, consolidations, land use changes, and connections or disconnections from the drain occur. This includes, but is not limited to, changes in the design flow from the WWTP, changes in the contributing flow from the former quarries, residential development of the former quarries or other properties, etc. Section 65 of the Drainage Act states the following:

#### ***"Changes in assessment"***

##### ***Subsequent subdivision of land***

*65 (1) If, after the final revision of an engineer's assessment of land for a drainage works, the land is divided by a change in ownership of any part, the clerk of the local municipality in which the land is situate shall instruct an engineer in writing to apportion the assessment among the parts into which the land was divided, taking into account the part of the land affected by the drainage works.* 2010, c. 16, Sched. 1, s. 2 (26).

##### ***Agreement on share of assessment***

*(2) If the owners of the subdivided land mutually agree on the share of the drainage assessment that each should pay, they may enter into a written agreement and file it with the clerk of the local municipality and, if the agreement is approved by the council by resolution, no engineer need be instructed under subsection (1).* 2010, c. 16, Sched. 1, s. 2 (26).

##### ***Subsequent connection to drainage works, etc.***

*(3) If an owner of land that is not assessed for a drainage works subsequently connects the land with the drainage works for the purpose of drainage, or if the nature or extent of the use of a drainage works by land assessed for the drainage works is subsequently altered, the clerk of the local municipality in which the land is situate shall instruct an engineer in writing to inspect the land and assess it for a just proportion of the drainage works, taking into account any compensation paid to the owner of the land in respect of the drainage works.* 2010, c. 16, Sched. 1, s. 2 (26).

#### **Subsequent disconnection from drainage works**

(4) If an owner of land that is assessed for drainage works subsequently disconnects the land from the drainage works, the clerk of the local municipality in which the land is situate shall instruct the engineer in writing to inspect the land and determine the amount by which the assessment of the land should change. 2010, c. 16, Sched. 1, s.2 (26)"

Any future severances within the Harrop Drain watershed should be accounted for in the Schedule of Assessment as per Section 65(1) and that the cost of adjusting the schedule be paid by the parties to the severance. Similarly, the Schedule of Assessment should be updated to account for all future land use changes, flow changes, and connections and disconnections as per Section 65(3) or Section 65(4), as applicable, at the cost of the applicant. Of note, as per Section 65(5):

*"No person shall connect to or disconnect from drainage works without the approval of the council of the municipality. 2010, c. 16, Sched. 1, s. 2 (26)."*

## **8. ASSESSMENT FOR REPORT COST**

The estimated cost for preparing this Section 76 report is \$90,000. This is an estimate only as the final costs of engineering and administration cannot be determined until the project is completed. This estimate does not include all potential costs to defend the drainage report should appeals be filed with the Court of Revision, Drainage Tribunal, and/or Drainage Referee as the extent of the work required cannot be determined in advance. Should additional costs be incurred, unless directed otherwise, the costs would be assessed in pro rata fashion as per the statement below.

As per the Agricultural Drainage Infrastructure Program, the costs for the preparation of this Section 76 report are not eligible for grant. The total cost of this report will be distributed pro rata to all properties within the Harrop Municipal Drain watershed in accordance with the Assessment Schedule included in **Appendix B**.

## **9. SUMMARY**

The Harrop Drain is nearly 7 km in length and services a watershed area of approximately 1,025 hectares from King Street West to just south of Lot 11, Concession No. 9 (former Township of Walpole) in Haldimand County. The catchment contains 575 parcels which includes roads and other municipally owned land.

This report was prepared on behalf of Haldimand County, in response to a Drainage Referee's order dated November 5, 2018, under the direction of Section 76 of the Drainage Act. This report is intended to be read in conjunction with the Harrop Drain report, dated December 5, 1957, prepared by R. Blake Erwin, P.Eng., O.L.S. The enclosed updated Schedule of Assessment determines the proportion of any future maintenance costs to be paid by each property based on the estimated amount of runoff each contributes to the Harrop Drain. This updated assessment was determined based on review of storm infrastructure and digital elevations to establish the catchment boundary, MPAC land use codes/Google maps, and site investigations with elevation checks.

After the adoption of this report, the Harrop Drain shall be maintained by the County, with the cost of all maintenance and repair work to be assessed to all upstream roads and lands pro rata with the Schedule of Assessment provided in this report. This Schedule of Assessment is not applicable until this report has been adopted under a County by-law.

All of which is respectfully submitted.

Yours truly,

GM BLUEPLAN ENGINEERING LIMITED

Per:
